United Nations Children's Fund

Executive Board

First regular session 2015

3-5 February 2015

Item 5 (a) of the provisional agenda*

Country programme document**

Mali

Summary

The country programme document (CPD) for Mali is presented to the Executive Board for consideration and approval at the present session, on a no-objection basis. The draft CPD includes a proposed aggregate indicative budget of \$75,345,000 from regular resources, subject to the availability of funds, and \$253,065,000 in other resources, subject to the availability of specific-purpose contributions, for the period 2015 to 2019.

In accordance with Executive Board decision 2014/1, the present document reflects comments made by Executive Board members on the draft CPD that was shared 12 weeks before the 2015 first regular session of the Executive Board

* E/ICEF/2015/1.

Programme rationale

1. Mali has an estimated population of 17.3 million in 2014, with 52 per cent of people aged under 18. With a population growth rate among the highest in the world at 3.6 per cent (Population Census, 2009), a fertility rate of seven children per woman and rapid urban growth (5 per cent per year), population growth poses enormous challenges in a country ranked 176th out of 187 for human development (Human Development Index, HDI) 2013). The growth in gross domestic product (GDP), estimated at 2.3 per cent in 2013, is still below the 7 per cent target for reducing the level of poverty in which one half of the population lives.

2. Since 2011, Mali has faced a serious political crisis coupled with an armed conflict and the occupation of the north (two thirds of the country's territory) by armed groups. On October 2014, Mali recorded its first confirmed Ebola case. As of early December 2014, there were 8 cases (7 confirmed, 1 probable) out of which 6 deaths have been recorded. The future evolution of the outbreak is uncertain, but Ebola virus disease has compounded an already dire humanitarian situation. The crisis in the northern regions has caused a severe humanitarian crisis, intervention by an international military coalition and the deployment of the United Nations Multidimensional Integrated Stabilization Mission in Mali (MINUSMA). As of at early 2013, the humanitarian crisis had directly affected 2.8 million people, including 340,000 internally displaced persons and 200,000 refugees. The organization of presidential, legislative and municipal elections in 2013 and early 2014 enabled a return to constitutional order, and Mali can now work towards overcoming its structural challenges and consolidate the peace.

3. Mali has made significant progress in recent years. The under-five mortality rate decreased by 42 per cent over the period 2000–2012, and was 123 deaths per 1,000 live births in 2013 (UN Inter-agency Group for Child Mortality Estimation, IGME); the net school attendance rate (58 per cent) increased by over 10 per cent between 2006 and 2011; and birth registration rates have increased significantly, from 53 per cent in 2006 to 81 per cent in 2010. With coverage of 67 per cent in 2012, Mali has reached the Millennium Development Goal (MDG) target for access to improved drinking water sources. However, insufficient progress has been made in implementing the 2007 recommendations of the Committee on the Rights of the Child.

4. Despite progress, significant disparities still exist between regions, between women and men, and between urban and rural areas. For example, access to improved sanitation facilities is 2.5 times higher in urban than rural areas; a woman living in a rural area is half as likely to be assisted by a skilled health care provider during childbirth than a woman living in an urban area; and there are considerable disparities between the northern and southern regions in terms of the availability and use of basic social services.

5. With less than 10 per cent of GDP spent on health, nutrition, education, water and the protection of children, the realization of children's rights in Mali is hitting serious roadblocks. In each of these sectors, social policies and budgets do not reflect sufficient concern for reaching the most vulnerable populations. Information systems capable of providing disaggregated and gender-sensitive data are poorly developed. Unfavourable social norms, lack of human and organizational resources, limited availability of services and household poverty affect supply of and demand for services.

6. Almost no decline has been observed in rates of neonatal and maternal mortality since 2000. At least 40 per cent of the population lives more than 5 kms away from a functional health facility. Even when these services are available, the quality of care and the rate of

curative care utilization (0.33 per capita per year) remain low. Neonatal conditions, malaria, pneumonia, diarrhoea and undernutrition still cause 70 per cent of deaths among children under five. In 2012, 13 per cent of the population still practiced open defecation.

7. The prevalence of stunting among children aged 0 to 59 months was 28 per cent in 2012 and has changed little over the years. The national prevalence of acute malnutrition among children aged 6 to 59 months is 13 per cent, higher than the 10 per cent threshold considered as a serious situation. The rate of exclusive breastfeeding to 6 months remains low, at 20 per cent in 2012.

8. The number of out-of-school children is estimated at 1.2 million (UNICEF WCARO, 2014), for reasons that include insufficient education provision, dysfunctions in school mapping, and financial and cultural barriers. Only 37 per cent of children (39 per cent boys, 35 per cent girls) enter the first year of school at the right age (7 years old) and the net primary school completion rate is 59 per cent (72 per cent boys, 48 per cent girls). The studies available (UNICEF, 2011) show that fewer than 1 in 10 schools has adequate water and sanitation facilities.

9. In terms of protection, data from the 2010 Multiple Indicator Cluster Surveys (MICS) suggest that social and gender norms perpetuate harmful practices and gender-based inequalities. Six out of 10 girls are married before the age of 18 (one in six before age 15); 9 out of 10 women are victims of female genital mutilation/cutting (FGM/C), and the practice is approved by 8 out of 10 people.

10. About 2.5 million children live on less than \$1.25 a day and experience deprivations in at least three of the following areas: health, nutrition, water and sanitation, education and protection. Half of these children live in the regions of Mopti and Sikasso. In the northern regions (Gao, Kidal and Timbuktu) that are home to nearly 15 per cent of the population, the relative burden of deprivation is even greater, reflecting low coverage of basic social services as well as significant disparities in coverage.

11. Due to the humanitarian crisis in 2012, the 2008–2012 country programme was extended to 2014, and reoriented from one that supported national sectoral strategies to a largely emergency-based programme. In anticipation of a return to peace, the programme will pay particular attention to strengthening the resilience of communities and systems.

12. With 70 per cent of deaths of children aged 0 to 59 months occurring in communities, in 2007, Mali introduced a national policy of community-based health care. The initiative, which was based on a network of community health workers, has increased service coverage since its inception. A 2014 evaluation showed that 42,000 under-five deaths were avoided between 2007 and 2012 through the introduction of a package of services at the village level. The new country programme will leverage this experience with a focus on stronger integrated programming at the community level, and on improving governance frameworks and sectoral decentralization to expand access to basic services for the most disadvantaged.

Programme priorities and partnerships

13. This country programme will be implemented as part of MINUSMA and will contribute to the objectives of the United Nations Development Assistance Framework (UNDAF) Plus 2015–2019. In reference to the objectives of the UNICEF Strategic Plan 2014–2017, special efforts will be made to integrate equity, gender, resilience and peacebuilding issues. The overall objective of the 2015–2019 country programme is to support the Government of Mali to increase equitable access to basic social services, strengthen the resilience of communities,

support service delivery systems and promote policies and budgets that are sensitive to the situation of the most disadvantaged groups and children, while ensuring a better transition from humanitarian action to development.

14. The programme will help to accelerate progress towards achieving national objectives, particularly in terms of equitable coverage of essential social services. Interventions will aim to improve the governance and efficiency of each sector. UNICEF will work with other partners to promote a national dialogue around the issues of population growth, youth and adolescent participation and rapid urbanization.

15. At the operational level, the programme will concentrate on three interrelated geographic areas. Taking into account the community-based health care initiative and deprivation analyses that show half of the poor children who suffer from at least three deprivations live in Mopti and Sikasso, the programme will focus on these two regions. In Mopti and Sikasso, all components of the programme will offer integrated service packages in communities and institutions (e.g. schools and health centres). These interventions will be guided by a participatory approach to strengthen the capacity of rights holders and duty bearers while working for social change, local ownership and equity-based programming.

16. Based on low coverage of basic social services in the three northern regions, and in furtherance of the United Nations Strategic Response Plan 2014–2016, the programme will support the government action plan for basic social services, social cohesion, economic recovery and return of public administrations. The water and sanitation sector will serve as a point of entry for multisectoral interventions guided by conflict and risk analysis, which will promote inter-community dialogue to strengthen social cohesion. The UNICEF response will be coordinated and integrated with other partner's interventions as part of the Government Accelerated Plan for the Development of northern regions and UNDAF Plus commitments for security, peace and national reconciliation.

17. In the other regions, the programme will support targeted sectoral interventions in areas with poor basic social service coverage, or child-specific vulnerabilities, or both.

18. Each component will formulate an output specifically focused on capacity-building to prepare and respond to crisis situations. With the recent outbreak of Ebola, as well as for other possible epidemics, UNICEF will strengthen the capacity of the health systems and build long-term resilience among the populations for disease prevention and control. Wherever possible, care will be taken to integrate the population's risk reduction and adaptation strategies. The forthcoming results of the 'Resilient Malian Child' study are anticipated to help UNICEF to refine and incorporate the resilience dimension into sectoral programming.

19. Analyses of the previous country programme have shown the following strategies to be indispensable in all sectors: empowering and building community resilience through integrated community-based approaches; systems- and capacity-building for service delivery, particularly in the most deprived areas; and advocating for political, legislative and budgetary reforms. Support for the collection of disaggregated data and monitoring equity-sensitive outcomes will be a backbone of the programme. Each component will pay particular attention to gender-sensitive programming and the development of cross-sectoral strategies aimed at increasing girls' school enrolment and reducing the prevalence of child marriage.

20. The programme will build on strategic partnerships and the organization's comparative advantage at the national, regional and global level. Full advantage will be taken of all partnership opportunities with the local private sector, civil society and technical and financial partners, including the bilateral and multilateral agencies present in Mali. The

UNICEF contribution will be guided by its commitments to national partnership frameworks (sector reforms) as well as global and regional initiatives. These include the Global Alliance for Resilience Initiative - Sahel (AGIR-Sahel), *A Promise Renewed*, partnerships with the Vaccines Alliance and the Global Fund to Fight AIDS, Tuberculosis and Malaria (health), the Scaling up Nutrition (SUN) and Renewed Efforts against Child Hunger and undernutrition (REACH) initiatives (nutrition), the Global Partnership for Education, and the United Nations Integrated Strategy for the Sahel. Efforts in the water, sanitation and hygiene (WASH) sector will be supported by the Sanitation and Water for All (SWA) partnership. Protection activities will be guided by regional policy and the Economic Community of West African States Regional Policy and Plan of Action for Child Protection and Child Trafficking.

21. The programme will include eight components that will seek to reduce the bottlenecks that limit communities' access to and utilization of services, particularly the most disadvantaged rural communities.

22. **Health:** As part of the Ten Year Health Sector Development Plan, the component will help to ensure that more children aged 0 to 59 months survive and reach their full potential, particularly in underserved communities. It will also contribute to reducing risk factors for maternal and neonatal deaths. At the institutional level, technical assistance will be provided in support of an integrated approach to universal health coverage. The programme focus will be on improving access to quality, high-impact interventions. The quality of care provided by health services, including the elimination of mother-to-child transmission of HIV and paediatric care, will be improved by identifying and removing the existing bottlenecks. Combating vaccine-preventable diseases in children and pregnant women will remain a priority, with efforts to strengthen the cold chain and improve micro-planning and decentralized monitoring. The move to a community-based health care strategy to combat the main diseases that kill children will cover at least 800,000 children over the period 2015 to 2019. In the north, this component will contribute to re-establishing health facilities and to greater access to and use of services.

23. **Nutrition:** As part of the SUN initiative and the global effort to reduce stunting, the nutrition component will help to reduce morbidity and mortality in children under 5 and strengthen their physical and cognitive development. The component will focus on the first 1,000 days of a child's life, including the mother's pregnancy. The nutrition component will support systems and capacity-building to scale up the Multisectoral Action Plan for Nutrition. In the Mopti and Sikasso regions, the prevention of chronic undernutrition will be the entry point for implementing a package of interventions. UNICEF will coordinate the interventions to facilitate the scale-up of activities to prevent stunting. The component will expand Integrated Management of Acute Malnutrition coverage by strengthening community screening for acute malnutrition, stepping up communication and increasing the involvement of community health workers. Nutrition-related activities will be combined with health, water, sanitation and hygiene, education and food security interventions to promote a preventive, multisectoral and integrated approach that can deliver maximum impact. Across the country, improved management of severe acute malnutrition remains a priority, along with the prevention of micronutrient deficiencies and the promotion of good infant and young child feeding practices.

24. **Equitable access to quality basic education:** This component will support the Ten-Year Education Development Plan (2015–2025) and contribute to inclusive education for children aged 3 to 15 years. It will support community-based approaches to school readiness for children aged 3 to 5 years, strengthen school retention and improved learning (for children aged 6 to 12 years), and promote a better transition between primary and secondary (for children aged 13 to 15 years). In addition, efforts will focus on removing barriers to accessing

quality learning, increasing retention rates for vulnerable groups and promoting a culture of peace. Through strategic partnerships and innovative financing mechanisms, this component will contribute to the development and implementation of a sectoral programme based on inclusion, equity, gender equality and risk management. It will also support the enrolment of girls and children excluded from the education system, particularly in the most disadvantaged areas of the country (Mopti, Sikasso and the northern regions). The component will enhance the quality of education, offering a WASH package in schools, mobilizing communities in the management of schools, and providing complementarity with interventions in other sectors (nutrition, health and child protection), including during the humanitarian response.

25. **Water, sanitation and hygiene:** To improve the health, nutritional and educational outcomes of rural populations, the component will increase the availability of safe drinking water and adequate sanitation, in conjunction with other programme components. Under SWA and the Malian Sectoral Programme for Water and Sanitation (PROSEA), the component will seek to make the sector a higher priority in national and local policies and budgets, and will help strengthen coordination and monitoring mechanisms. In the Mopti and Sikasso regions, the component will support community-based interventions in other sectors (health, nutrition and education) and will help schools, health centres and nutritional centres to meet recognized standards. The component will encourage students to become “agents of change” in their communities. In the northern regions, the programme will focus on restoring the drinking water supply, improving the quality and sustainability of public water utilities and supporting the redeployment of local government technical services, particularly water systems, sanitation and emergency preparedness. In all supported interventions, UNICEF will be bound to respect national environmental rules and regulations

26. **Child protection:** Based on the sector analysis and the 2007 recommendations of the Committee for the Rights of the Child, this component will improve the governance framework for the protection of children, community level prevention and expansion of the response to abuse, exploitation and violence. At the macro level, the focus will be on policy, regulatory and budgetary frameworks and on sector coordination. At the medium level, interventions will be centered on institutional support, and service- and capacity-building of governmental and non-governmental actors to improve responses. At the community level, the component will concentrate on parental education and increasing community dialogue to promote positive social norms and practices, and the dissemination of policies and laws that protect children. In connection with the other sectors, these focus areas will help to specifically address FGM/C, child marriage and lack of birth registration. By promoting innovative approaches, and with contributions from the health sector, the component will address low rates of birth registration in the northern regions.

27. **Social policy and inclusion:** The component will help to define strategies to strengthen resilience, especially in the most vulnerable communities. Interventions under this component will focus on the following areas: support to public policy and finance, informed by ongoing research for the forthcoming study on the ‘Resilient Malian Child’; and contribution to the development of a national social protection system. In support of decentralization, the zonal offices in Gao, Kayes, Mopti and Sikasso will play a critical role in accompanying the Government to establish and implement more equitable interventions with enhanced community participation. The component will contribute to social innovation and institutional capacity-building at the national and local levels, while ensuring that basic social services are adequately funded.

28. **Cross-sectoral support programme:** This component will consist of four sub-components that will maximize the impact of interventions for children and women by reinforcing the synergy and linkages between the programme’s various components.

Planning, Monitoring and Evaluation (PME) will support implementation of Statistics Master Plan (SDS), help build sectoral statistical capacity, and promote a culture of evaluation and the regular production and dissemination of disaggregated statistics, which will facilitate the development of equitable public policies. In addition, it will strengthen the country office's performance management mechanisms, and ensure that all programming initiatives are based on equity. **Communication for Development (C4D)** will facilitate the inclusion of social and behaviour change in each component, and will promote social cohesion and community dialogue. It will concentrate on preventing undernutrition and violence against children and women, with a focus on child marriage and FGM/C. In the northern regions, the focus will be on peace consolidation and building a culture of peace at the community level. **External Communication and Partnerships** will work with national and international media and other partners for the promotion and respect of the rights of children, especially the most vulnerable. The **Emergency Coordination and Strategy for the North** component will ensure that the country office develops and implements mechanisms for preparedness and rapid response to humanitarian crises, and that each sectoral component includes activities that are consistent with UNICEF commitments for children in emergency situations. As part of the 2014–2016 Strategic Response Plan and in order to strengthen social cohesion and resilience in communities affected by crises, the component will coordinate all interventions aimed at re-establishing basic social services.

29. **Cross-sectoral costs:** This component will cover programme costs related to supplies, logistics, the operation of area offices, and administrative and operating expenses.

Summary budget table

<i>Programme component</i>	<i>(In thousands of United States dollars)</i>		
	<i>Regular resources</i>	<i>Other resources</i>	<i>Total</i>
Health	10 240	38 385	48 625
Women and children's nutrition	10 000	93 520	103 520
Water, sanitation and hygiene	4 750	46 440	51 190
Equitable access to quality basic education	13 350	25 765	39 115
Child protection	7 000	11 995	18 995
Social policy and inclusion	2 500	7 195	9 695
Cross-sectoral programme support	13 000	18 705	31 705
Cross-sectoral costs	14 505	11 060	25 565
Total	75 345	253 065	328 410

* Based on the Strategic Response Plan 2014–2016 and amounts mobilized in recent years, other resource emergency funds (ORE) of approximately \$100 million are expected for 2015–2019, but are not included in the above table.

Programme and risk management

30. The programme is consistent with the country's development and peacebuilding challenges. The proposed priorities and strategies align with those identified in UNDAF Plus 2015–2019: equitable access to basic social services; enhancing security, peace and national

reconciliation; promotion of good governance; inclusive growth and sustainable development. Programme implementation will be aligned to UNDAF Plus. UNICEF will chair the results groups in education and health as part of its contribution to achieving results in the United Nations Joint Work Plans. In the northern regions, UNICEF response will be implemented and funded under the regular programme and the inter-agency Strategic Response Plan.

31. Conflict and insecurity in the north, the risk of disasters (drought, floods and locust invasions) and epidemics (cholera and Ebola), dwindling financial resources, the risk of corruption and the poor capacity of implementing partners are the main vulnerabilities identified for the programme. As part of MINUSMA, a harmonization of efforts will systematically be sought in order to conduct joint risk analyses and conduct programme criticality assessments, manage costs and security risks by promoting shared area offices in certain parts of the country, and strengthen early warning mechanisms, rapid assessment and response to humanitarian crises, with a focus on disaster risk reduction.

32. In 2015, the guidelines for the harmonized approach to cash transfers will be implemented by the United Nations agencies, including UNICEF, and will help to promote a culture of risk reduction and risk management.

33. The role of UNICEF area offices (in Gao, Kayes, Mopti, Sikasso and Timbuktu) will be enhanced in planning, implementing and monitoring decentralized interventions as well as local control of resources. These developments will improve the country programme's efficiency and effectiveness.

34. This country programme of cooperation describes the contribution of UNICEF Mali to national targets, and will establish its accountabilities before the Executive Board for the planned results and resources allocated to the country. The accountabilities of UNICEF Mali staff for implementing the programme are described in UNICEF programme and operations policies and procedures.

Monitoring and evaluation

35. Implementation of this cooperation programme will be coordinated and monitored by the Ministry of Foreign Affairs, African Cooperation and International Cooperation through a Steering Committee chaired by the Department of Multilateral Cooperation and including representatives from the relevant ministerial departments.

36. To increase the programme's effectiveness in producing more equitable outcomes for the most disadvantaged women and children, UNICEF will develop an Integrated Monitoring and Evaluation Plan focused on equity. It will strengthen the monitoring function of area offices by deploying additional human capabilities and using innovative approaches to decentralized monitoring. Through a strategic partnership with the European Union (EU), the Swedish International Development Cooperation Agency (SIDA), the United States Agency for International Development (USAID), the World Bank and the World Food Programme (WFP), the programme will invest in quality assurance and will strengthen monitoring systems and statistical expertise. This will ensure national and local statistics can provide disaggregated data by sex on disparities as well as bottlenecks, and promote gender-sensitive programming. Specifically, information and communication technology for monitoring and evaluation will be used to enhance real-time monitoring of progress for the most disadvantaged. In addition, innovative approaches will be introduced to ensure that the programme's beneficiaries, especially the most disadvantaged, are more involved and can provide feedback on the results and quality of the programme.

37. The programme will support operational research. Special care will be taken to promote a culture of evaluation and to perform quality evaluations. The Evaluation Plan will be based on the evaluation of the programme integration model in Mopti and Sikasso, the cost-effectiveness evaluation of capacity-building strategies, and the evaluation of the area offices model.

Annex

Results and resources framework
