Draft country programme document

Plurinational State of Bolivia

Summary

The draft country programme document (CPD) for Bolivia is presented to the Executive Board for discussion and comment. The draft CPD includes a proposed aggregate indicative budget of $8,425,000 from regular resources, subject to the availability of funds, and $35,000,000 in other resources, subject to the availability of specific-purpose contributions, for the period 2018 to 2022.

* * In accordance with Executive Board decision 2014/1, CPDs are now considered and approved in one session, on a no-objection basis. This CPD, along with the costed evaluation plan, is being presented to the Executive Board for review from 19 June to 7 July 2017. The final CPD will be posted to the Executive Board web page in English six weeks ahead of the 2017 second regular session and in the other designated languages four weeks ahead of the session, in accordance with established practice.
Programme rationale

1. The Plurinational State of Bolivia (hereafter “Bolivia”) is one of the world’s most culturally diverse countries. Some 42 per cent of its 10.6 million people are indigenous, divided into 37 nations. The country is home to 3.8 million children, the majority (66 per cent) living in cities.¹

2. Bolivia has achieved extraordinary economic and social improvements during the last 10 years, due to a favourable international context coupled with prudent macroeconomic management. The gross domestic product grew at an average rate of 5 per cent between 2006 and 2015, reaching 6.8 per cent in 2013. This significant economic growth brought Bolivia to being a lower-middle-income country in 2015.

3. Increased investments resulted in significant progress in social development. The implementation of redistributive social protection policies such as the Bono Juancito Pinto (education) and Bono Juana Azurduy (maternal and child health) have improved the situation of some populations. Extreme poverty has fallen by 21 percentage points (from 38 per cent in 2006 to 17 per cent in 2014), a decrease of 1.7 million people. At the same time, the gap between the richest and the poorest was reduced.

4. Despite positive socioeconomic trends, 43 per cent of children continue to live in conditions of multidimensional poverty. Moreover, economic analysis has shown that the country’s economy has been stagnating in the last two years, leading the Government to increase its public debt. This is likely to affect the availability of resources for social programmes within the Government’s development framework for the long and medium term (the Patriotic Agenda 2025 and the 2016–2020 Economic and Social Development Plan), triggering possible cutbacks in efforts to reduce poverty and inequities, particularly for marginalized indigenous populations.

5. Bolivia is also experiencing rapid urbanization and migration of indigenous peoples to the cities. Its four biggest cities are home to almost half of the total population. These trends are resulting in unplanned settlements, poor infrastructures, land degradation and pollution, as well as increased pressure on fresh water supplies and elevated risks of insecurity and vulnerability to all forms of violence. They are also likely to result in large rural areas or even entire municipalities being depopulated and defunded for essential services, putting children and adolescents at risk.

6. Several challenges affect the chances for children to survive and thrive in their early childhood. Maternal mortality is still among the highest in the region (160 per 100,000 live births, of which 68 per cent occur among the indigenous).² Infant mortality has been reduced (44 per 1,000 live births)³ and there has been a significant decrease in malnutrition, yet 18 per cent of children under 5 are chronically malnourished, with great disparities showing between indigenous and non-indigenous populations.⁴ Open defecation shows a rate of 44 per cent in the rural population,⁵ which also suffers from poor access (20 per cent) to quality

¹ Instituto Nacional de Estadística (INE), Censo Nacional de Población y Vivienda, 2012.
³ Unidad de Análisis de Políticas Sociales y Económicas (UDAPE), Objetivos de Desarrollo del Milenio en Bolivia, Octavo Informe de Progreso, 2015.
⁵ UDAPE, Análisis de Progresos en el Acceso a Fuentes Mejoradas de Agua y a Instalaciones Mejoradas de Saneamiento, Oct 2016.
water, still drinking surface water. Some 22 per cent of children below age 1 lack birth registration, and fewer than half of children aged 4–5 have access to early childhood services. In addition, only 30 per cent of mothers and 15 per cent of fathers are involved in activities that stimulate the development of their child.

7. While the country has made important progress in education, almost reaching universal access to primary education, adolescents still face difficulties in accessing and completing secondary school. Around 151,000 adolescents are out of school, and 4 out of 10 do not complete secondary education. In 2012, in rural areas, 18 per cent of adolescents aged 12–17 in rural areas were out of school, in comparison to 8 per cent in urban areas. In addition, the country has not enough tools and parameters to measure the quality of education, including learning outcomes and the performance of students and teachers. Even though more girls than boys complete school (the difference is 6.4 per cent in secondary education), this does not necessarily result in better opportunities later in life.

8. Bolivia faces considerable challenges to delegitimize and eradicate violence against children (VAC) and to overcome widespread gender inequality and gender-based violence (GBV), two pressing issues. Some 10 per cent of women have been victims of sexual abuse at some point in their lives, many of them during their adolescent years. Discipline through violence is still common: in one study, 71 per cent of women and 68 per cent of men reported that they agree with at least one reason that justifies corporal punishment.

9. More than 8,000 children and adolescents live in institutional care, although 80 per cent have a family. Institutional capacity and inter-institutional coordination are too weak to ensure family reintegration or alternative care solutions. Consequently, most children living in institutions remain there until adulthood.

10. Although the Child and Adolescent Code has a progressive juvenile justice dimension, adolescents face lengthy procedures and pretrial detention, and restorative measures are used infrequently. Out of the adolescents judged by the Children and Adolescents Court in 2013, 582 were held in adult prisons and 650 in specialized centres. Of those held in prisons, 97 per cent were under preventive detention awaiting their sentence. In 2014, more than 900 children were living in prisons with their parents, despite not having committed crimes.

11. Bolivia is vulnerable to natural disasters and climate change, especially severe droughts and floods that dramatically impact the lives of already-vulnerable populations, including children. Between 2002 and 2012, 84 per cent of municipalities were affected by flooding.

10 Estimate based on 2012 census.
12 INE, 2012.
13 UDAPE, 2015.
and 67 per cent by drought. In 2016 in La Paz, severe water rationing and almost-dried-out water reserves affected more than 800,000 people.

12. Public institutions at central and decentralized levels still face capacity gaps in human resources, institutional, programme and budgetary management, and insufficient statistics and systems for monitoring results, making it difficult for national policies to engender equitable results for children. Social norms, gender dynamics, poverty, and limited support for parents and families hinder the full adoption of caring family practices around health, nutrition, education and protection of children. Of great concern are the pending fourth and fifth State reports on the implementation of the Convention on the Rights of the Child, which were due in 2014.

13. Lessons learned from the 2013–2017 country programme show that it is necessary to balance its approach at national and subnational levels. Working at national level is still fundamental for contributing to changes that can maximize the reach for children in the whole country. Meanwhile, the enhanced work at subnational level has demonstrated the importance of these spaces for the translation of public policies and investment into concrete results for children. It is also clear that results could have been more substantial if an interlinked and integrated approach to programming was applied in better-defined geographical areas, targeting fewer critical issues that affect the most vulnerable children.

14. For the 2018–2022 CPD, UNICEF will continue to provide support and advocate at national level in terms of improving child rights monitoring, fostering innovation, and strengthening public policies and financing for children, aiming to support the Government to take cost-effective interventions to scale. At the subnational level, the programme will converge programme interventions in four selected departments to foster intersectoral collaboration and programming.

Programme priorities and partnerships

15. The overall goal of the programme is to support the Government in narrowing inequality gaps, with special consideration of indigenous peoples, and positioning children and adolescents as a foundation for the country’s sustainable development.

16. The country programme priorities respond to the Situation Analysis of children and adolescents in Bolivia, the results of the 2016 Gender Programmatic Review, and various normative frameworks, particularly the Child and Adolescent Code, the Convention on the Rights of the Child, and the Convention on the Elimination of All Forms of Discrimination against Women. It contributes to the Government’s long- and midterm development framework, the Sustainable Development Goals, and the UNICEF Strategic Plan, 2018–2021. The Programme directly contributes to the five outcomes of the 2018–2022 United Nations Development Assistance Framework (UNDAF). In line with the mandate of UNICEF, the country programme will contribute to the implementation of the Gender Action Plan.

17. UNICEF will consolidate existing, and create new, strategic partnerships with stakeholders within and outside the Government at both national and subnational levels to increase the reach and value of public policies for children. Cooperation with other United

---

18 Data made available by the Vice Ministerio de Defensa Civil, 2014.
Nations agencies will help produce results for children in an effective and an efficient manner.

18. UNICEF’s approach can be summarized in three elements. First, it will support policy and budgeting changes to create an enabling environment for children. Second, it will strengthen the availability of quality equitable services for children, adolescents and families, enhancing intersectoral coordination. Third, it will promote family care and protective practices as well as increase public awareness on children’s rights and the importance of positioning children at the core of the national development agenda.

19. The Bolivia–UNICEF country programme 2018–2022 is structured around the four outcome areas described below. The programme adopts a two-pronged approach to programming: delivering sector-specific results as well as contributing to other results areas through an intersectoral approach.

**Every child survives and thrives**

20. The first programme component focuses on contributing to guaranteeing Integrated Early Childhood Development (IECD) for all children in Bolivia, in line with the Sustainable Development Goals 2 and 4 and related results in the national development.

21. The Theory of Change (ToC) that guides this component is that young children below age 5 will have improved their chances to survive and thrive on the following conditions: if the country develops and implements an IECD policy and institutional framework that creates cooperation among sectors and efficiently allocates resources for implementing IECD at scale; if basic social services (child and maternal health, nutrition, water, sanitation and hygiene (WASH), early education, child protection and social inclusion) are accessible and of quality to care for, respond to and manage the needs and rights of the youngest children in an integrated way; and if parents and caregivers are aware and engaged in the early development of their children. Along this line, UNICEF is committed to supporting the Government in creating a multisectoral and holistic approach to IECD, with a special focus on the needs of the most vulnerable children.

22. This component will be implemented through a two-pronged approach: (a) support to the implementation of established sector policies and programmes promoting cost-effective interventions and intersectoral collaboration in favour of integrated ECD; and (b) design of an integrated demonstrative model for integrated ECD, which will be implemented in selected municipalities, to be evaluated and, if successful, scaled up at departmental and national levels. The model includes combined interventions on health, including enhancing the following areas: the quality of maternal and child services; nutrition related to adequate feeding practices; WASH to improve quality access to sustainable basic and safely managed water and sanitation services; child protection to improve birth registration services and prevent violence and abandonment of young children; early learning for increasing parents’ knowledge on ECD and their demand for quality early learning opportunities; and social inclusion, including by advocating for and supporting the development of an IECD policy, monitoring budgetary investments in ECD, and advocating for more efficient use of funds.

23. This programme component will interact with the other components in constructing baselines, generating evidence, using data, and monitoring results. This linkage among components will be enhanced by an overarching communication for development approach part of covering the entire country programme. The component will promote gender-informed programming and aimed specifically at changing gender stereotypes in parenting and ECD.
Every child learns

24. This component focuses on supporting the Government to guarantee that children and adolescents have the opportunity to improve their learning outcomes and complete their secondary education in flexible, innovative and safe learning environments. It is in line with Sustainable Development Goal 4 and related results of the national development plan.

25. The ToC for this component is that adolescents will be able to conclude their secondary education with adequate learning outcomes that will promote their development and help them to reach their full potential if the following conditions are met: the country is able to monitor, evaluate and create standards for quality of education; all adolescents, particularly the most disadvantaged, have access to quality and life-relevant education opportunities; the education system implements mechanisms to prevent VAC and exclusion; and families and children are empowered and take on the roles as agents of change in decision-making processes regarding education management. This ToC is premised on the development and implementation of a systematic approach to overcome the critical barriers that hamper the development of children and adolescents, such as malnutrition, disabilities, GBV, adolescent pregnancy, child labour, inadequate WASH and lack of opportunities for adolescents’ participation.

26. UNICEF will foster changes in the educational system by advocating with and supporting the Government to develop flexible forms of education that reach adolescents in various settings at decentralized levels such as the Amazon, rural and peri-urban areas. At the same time, UNICEF will promote and provide support for changes in the curricula so that they are more culturally appropriate, address gender norms and inequality, and are used as a tool to discuss largely taboo topics such as VAC, early pregnancy and sexual behaviour, and menstrual hygiene management, among others.

27. This component takes into consideration that the educational system is key to prevent, detect and address VAC and exclusion. It will help to foster an environment where children and adolescents feel safe, and where child protection issues are incorporated into the curriculum and extracurricular activities. Teachers and school staff should be able to detect if students are exposed to violence, and to access mechanisms to prevent and support children and adolescents to respond to VAC.

28. A combination of strategies – particularly evidence-based advocacy and policy dialogue, cross-sectoral and gender-informed programming, capacity development bridging the humanitarian divide, empowerment of adolescents as agents of change, C4D and partnerships – will be employed in this programme component. The component promotes the need for gender-informed programming aiming at empowering adolescent girls, and working with boys to challenge gender norms through participation in decision-making processes and life-skills promotion.

Every child is protected from violence and exploitation

29. This component focuses on strengthening a protective environment where boys and girls are free from violence, exploitation, and unnecessary separation from their family and community, where they can be reintegrated in society, where those who need have access to alternative care, and where laws, services, behaviours and practices minimize children’s vulnerability, reduce risk factors, and strengthen children’s own resilience, including in emergency situations. It is in line with the Sustainable Development Goal 16 and related results of the national development plan.
30. The ToC for this programme component is that children and adolescents will be able to grow up free from all forms of violence, abuse, neglect and exploitation, including in emergency situations if the following conditions are met: adequate resources are allocated to fund the implementation of the child protection system in accordance with the Child and Adolescent Code; Bolivia has an effective child-friendly justice system, including access to specialized child protection services and prevention programmes; and families, communities and children themselves have knowledge about VAC/GBV and its negative consequences for a child’s well-being and development, about how they can prevent it, and the conditions to seek support.

31. At the national level, UNICEF will work towards designing and implementing formal training on child protection interventions such as administration of protocols, attention, and referral mechanisms. At the department and municipal levels, UNICEF will work with different institutions to strengthen capacities for efficient coordination of reporting and referral, prosecution of perpetrators and provision of specialized attention to child victims of violence, abuse, neglect and exploitation, with special attention to sexual violence. UNICEF will work towards improving monitoring capacity and will foster cooperation among various stakeholders for the development of intersectoral interventions. In terms of rights-holders, UNICEF will support children and adolescents as agents of change, by empowering them in topics related to violence, and consequently, strengthening their own skills to prevent violence and demand their rights.

32. It is expected that the interventions supported by UNICEF will facilitate coordination between relevant stakeholders and sectors, mainly between health, education, justice and specialized child protection services to better prevent and respond to VAC. The cross-sectoral approach will be operationalized by the design and implementation of tools, reporting and referral mechanisms in the health and educational systems, including at the community level. Moreover, support will be provided for the development of specific studies to cost and analyse the possibility of implementing alternative measures to better protect children from violence.

33. Working both with duty-bearers as well as rights-holders, UNICEF’s main strategies for this component will focus on the strengthening of (a) institutions and social service providers by developing an integrated child protection response, including child welfare reform, justice for children and child rights monitoring, and (b) families and children’s knowledge and skills to reduce, prevent and report cases of violence, neglect and exploitation. In addition, new partnerships with academia will be developed and alliances with the private sector will be expanded, aiming to raise awareness on the importance of protecting children from violence. The component will also promote the need for gender-informed programming aimed at preventing and responding to GBV, with a focus on sexual violence, including in emergency situations, and on commercial sexual exploitation.

**Every child has an equitable chance in life**

34. This component aims to promote the universal agenda of the Sustainable Development Goals and ensure that key child rights issues are positioned within the new national development agenda at national and decentralized levels. Coordinating with and complementing the other components, this component will work with government and other partners to generate an enabling political environment. Efforts will go towards strengthening the capacities of governmental institutions to manage public policies and monitor and analyse the situation of children. This includes poverty trends and socioeconomic and climate change risks in urban, rural and peri-urban settings. In addition, it will foster and leverage
partnerships to support the cause of children among a multitude of stakeholders including decision makers and the wider public. Increasing the public outreach will allow for the creation of a movement for children that will help to influence public policies, fuel social engagement and drive the growth of public and private investment for sustainable changes for children.

35. The ToC for this programme component is that children and adolescents will grow up with better opportunities and be better protected from socioeconomic and climate change risks if the following conditions are met: the capacities of national and subnational governmental institutions are strengthened to include key child rights issues in public management, financing and monitoring as part of the national development planning system; there are adequate plans and policies, instruments and methodologies in place at national and subnational levels related to climate change adaptation and disaster risk management; and the public awareness, social mobilization and multi-stakeholder partnerships are strengthened to ensure the creation of a movement that actively promotes and advocates the realization of child rights.

36. The component will also work towards removing institutional bottlenecks and barriers – such as the shortfall of analytical tools and capacity gaps at different governmental levels in planning and in monitoring and evaluation – aiming to increase and improve public financing for children. The support will be based on the agreed methodology for identifying, measuring and reporting on child-focused public investment developed in the previous programme cycle.

37. The main strategies are to enhance government capacity at national and subnational levels to plan and design public policies addressing multiple deprivations and gender inequalities faced by children and their families across the life cycle. This will depend on the capacities in the collection, management and dissemination of data, and use of evidence-based analyses to monitor the situation of children. A strategic research and evaluation agenda will therefore generate evidence on vulnerable and excluded children and on emerging issues affecting child well-being, aiming to guide policy decisions. Emphasis will be placed on the effects of climate change and disasters on children.

38. Lastly, this component will foster and expand multi-stakeholder partnerships with the public and private sector, strengthening public awareness and engagement, including that of children and adolescents themselves, to guarantee that children and adolescents are positioned at the core of the national development agenda and enjoy public support and investment.

Programme effectiveness

39. This outcome will ensure efficient and effective programme management, enhance external relations and multi-stakeholder partnerships, institutional communication, monitoring and evaluation, strategic planning and gender mainstreaming. This outcome will support effective convergence and articulation of the various programme components around common results, such as the prevention and response to VAC, leveraging of partnerships and resources, risk-informed programming and emergency response, and parenting and family care practices. Innovations for improved programme performance, particularly using information technology, will be developed and supported.

Programme and risk management

40. This CPD outlines UNICEF contributions to national results and serves as the primary unit of accountability to the Executive Board for results alignment and resources assigned to the programme at country level. Accountabilities of managers at the country, regional and headquarter levels with respect to country programmes are prescribed in the organization’s programme and operations policies and procedures.

41. The programme will work with the Government in the implementation of existing policies, finding cost-effective solutions to address key barriers and bottlenecks hampering the realization of children’s rights. It will also develop and support the scaling up at the national level of a demonstrative model for IECD implemented in selected municipalities and departments. Effective programme management will therefore depend on solid monitoring of the interventions at the local level through frequent programme visits and monitoring. The Harmonized approach to Cash Transfers (HACT) policy will be fully implemented.

42. The programme has been developed in close collaboration with the Government and is aligned with the priorities set out in the 2016–2020 Economic and Social Development Plan, including sector policies and programmes. UNICEF will work with United Nations agencies, together with the Government, to monitor and evaluate progress towards results, using the UNDAF coordination mechanisms. UNICEF will undertake regular monitoring and periodic programme reviews with the Government and other partners, aiming to identify and mitigate risks early on to ensure the achievement of results.

43. Among the external risks that could affect the UNICEF contribution to results and the overall situation of children is a slowdown in the country’s economy. This could affect the sustainability of public policies on poverty reduction and on assisting vulnerable groups. To mitigate these risks, UNICEF will monitor the political and fiscal situation of the country and closely track government investments regarding children and adolescents. In case of possible reductions in these social budgets, UNICEF will use its influence and partnerships to advocate for investing in children as an important means to achieve the national development goals and Sustainable Development Goals.
44. Another potential risk would be a lack of predictable minimum funding, the lack of which would impact achieving programme goals. To avoid this, UNICEF will strengthen partnerships with the private and public sectors to leverage resources for children.

**Monitoring and evaluation**

45. UNICEF will systematically monitor its contributions towards results as outlined in the programme’s results and resource framework. Data on children will be regularly collected. To support surveys, UNICEF will collaborate with the Government and other United Nations agencies to facilitate data collection and reduce costs, making it possible for surveys to be administered and used more frequently and efficiently. Programmatic workplans, the Integrated Monitoring and Evaluation Plan, the costed evaluation plan and the HACT policy will define all actions to ensure adequate monitoring for achievement of programme results. UNICEF and the Government will also conduct reviews as appropriate to assess progress and make programme adjustments in alignment with the Government’s annual planning process.

46. In partnership with other United Nations agencies and as part of the UNDAF monitoring framework, UNICEF will work with relevant ministries to develop and/or strengthen data-collection capacity to help ensure that the country produces, makes available and utilizes high-quality data on children and adolescents.

47. Evaluations are part of the learning mechanism that the country office will strengthen internally. UNICEF plans to directly commission three evaluations and will work with different actors to ensure that other evaluations take children into consideration, are independent, and make recommendations that can be used to improve policies and programmes in the country.

### 3. By 2022, children and adolescents victims of violence, abuse, neglect and exploitation are protected by functioning systems, policies and a national legal framework aligned with international standards, including in emergency situations.

2 New baselines are underway with the new DHS 2016.
### UNICEF outcomes

**Key progress indicators, baselines (B) and targets (T)**
