

ANNEX 2. Micro Assessment Questionnaire

Please see separately provided excel format for the questionnaire with calculation formulas included, which has to be used. The excel file can also be found at www.undg.org/.

Instructions

This questionnaire contains questions related to seven subject areas. Certain questions are classified as “key questions” indicating that they have a greater impact in assessing the effective functioning of the IP’s control framework.

1. Answer each question by selecting ‘Yes’, ‘No’ or ‘N/A’ (for ‘not applicable’) from the drop-down menu in the appropriate column.
2. Use the Risk Assessment column to assign a risk rating (high, significant, moderate or low) for each question based on the response obtained. For example, if the question addresses an item that should ideally be marked ‘Yes’ but was marked ‘No’, it should be assessed for the level of risk it presents to the effective functioning of the IP’s control framework. Assigning risk ratings to each question requires judgment by the assessor as to how the response will impact the effectiveness of the IP’s control framework. **Attention: THE APPROPRIATE RISK ASSESSMENT OR “NOT APPLICABLE” MUST BE SELECTED FOR EACH QUESTION. IF THERE ARE QUESTIONS CONTAINING “ERROR” THE RISK RATING FOR THE CATEGORY AND OVERALL WILL BE WRONGLY CALCULATED!**
3. The risk ratings to be used are:
 - **High** – Response to question indicates a risk to the effective functioning of the IP’s control framework that has a high likelihood of a potential negative impact on the IP’s ability to execute the programme in accordance with the work plan and stated objectives;
 - **Significant** – Response to question indicates a risk to the effective functioning of the IP’s control framework that has a significant likelihood of a potential negative impact on the IP’s ability to execute the programme in accordance with the work plan and stated objectives;
 - **Moderate** – Response to question indicates a risk to the effective functioning of the IP’s control framework that has a moderate likelihood of a potential negative impact on the IP’s ability to execute the programme in accordance with the work plan and stated objectives; or
 - **Low** – Response to question indicates a low risk to the effective functioning of the IP’s control framework and a low likelihood of a potential negative impact on the IP’s ability to execute the programme in accordance with the work plan and stated objectives.
 - *N/A – The specific question is not applicable for the IP and therefore no risk rating is assigned.*
4. The Risk Points column automatically assign points to each question that correlate with the level of risk.
5. Points are assigned as follows:

Risk rating	Points: non-key questions	Points: key questions
H – High risk	4 points	8 points
S – Significant risk	3 points	6 points
M – Moderate risk	2 points	4 points
L – Low risk	1 point	1 point

6. Use the 'Remarks/ comments' column next to each question to provide details of your assessment or to highlight any important matters. This document will be referenced subsequently by the agency when performing additional assurance activities related to the IP. Sufficient details should be provided in this document for the agency to understand the details and rationale for your assessment.

Calculation of risk rating per subject area section

For each subject area, the risk points are totaled and divided by the number of applicable questions in that area, to give a risk rating for the subject area. The method of calculation is weighted average, where key questions have double the weight of non-key questions as illustrated in Note 1.

Calculation of overall risk rating

For all the questions in the questionnaire, the risk points are totaled and divided by the number of applicable questions, to give an overall average score. The method of calculation is weighted average, where key questions have double the weight of non-key questions as illustrated in Note 1.

Note 1 – Method of assigning risk ratings to risk scores

As per paragraph 5, key questions are assigned double the risk points, resulting in a weighted average method for calculating the overall and by subject area risk rating. Therefore, the risk rating assigned to the key questions have twice the weight in determining the risk rating.

Assume the following two scenarios with the same risk rating for the questions.

1. Scenario 1: There are three non-key questions having equal weight
2. Scenario 2: The first question is key and the remaining two questions are non-key.

Scenario 1	Risk Rating	Points	Scenario 2	Risk Rating	Points
Question 1	High	4	Key Question 1	High	8
Question 2	Low	1	Question 2	Low	1
Question 3	Low	1	Question 3	Low	1
Total Risk Points:		6	Total Risk Points		10
Overall Risk	Moderate	2	Overall Risk	Significant	3.3

The Excel spreadsheet automatically assigns the risk rating by using the following algorithm:

1. Only the applicable questions are taken into consideration
2. The minimum possible points for the subject area are calculated, that is if all questions are assigned low risk rating
3. The maximum possible points for the subject area are calculated, that is if all questions are assigned high risk rating
4. The ranges for each risk rating are calculated by evenly distributing between the lowest and highest applicable points
5. The actual risk points are matched with one of the four risk ranges to determine the overall risk category.

The same algorithm is applied when calculated the overall risk rating for the IP.
