Kenya

Kenya continues to face high levels of vulnerability to shocks including drought, floods, and internal and cross-border civil strife, especially among marginalized communities. These factors have contributed to devastating rates of chronic and acute malnutrition. Due to below-average rains, constrained food access and high food prices, over 1.5 million people who live mainly in the northern pastoral areas and the marginal agricultural areas of the country currently require food assistance. Malnutrition rates among children are high, with an acute malnutrition rate of above 20 per cent for pastoral children in Northern Kenya, with close to 310,000 children requiring treatment. Access to safe water is lowest mainly in the arid and semi-arid lands where food insecurity and malnutrition are rampant, predisposing households to water-borne diseases. For example, household water treatment is less than 10 per cent in Wajir (9.2 per cent) and West Pokot (6.7 per cent). Repeated episodes of intercommunal violence and flooding are disrupting schooling for displaced children, and hindering access to routine immunizations, maternal/neonatal care and nutritional services, leading to further vulnerabilities. Kenya remains susceptible to the current Ebola outbreak due to its position as a transit hub, its porous borders, poor public information and a weak health system. Refugee influx into the Kakuma Refugee Camp continues due to the insecurity in South Sudan. By October 2014, there were 43,940 newly arrived South Sudanese refugees, 29,743 of whom are children. Of these, one in four children under five are acutely malnourished and 7,298 are unaccompanied or separated, making them especially vulnerable to sexual and gender-based violence (SGBV) and unlikely to access schooling. UNICEF and partners are planning for an additional 30,000 new refugees from South Sudan in 2015.

Humanitarian strategy

In 2015, UNICEF will support the Government of Kenya and partners’ response to the humanitarian needs of more than 1.2 million children affected by food insecurity, malnutrition, disease outbreaks, displacement and SGBV, including support to refugee populations from South Sudan. Technical and financial assistance will be provided to support coordination of key sectors (nutrition, health, WASH, protection, education and HIV/AIDS). High Impact Nutrition Interventions will be scaled up in the Arid and Semi-Arid counties, urban informal settlements, Kakuma and Dadaab refugee camps and immediate host communities. Coordination systems at the national and county levels in the nutrition sector will be supported by UNICEF, to ensure the timely development of contingency plans, response planning, gap analysis, partnership mapping, and other activities. Child Protection and SGBV interventions will involve scaling up

1 2014 October to March 2015, FEWSNET Kenya Food Security Outlook. This figure changed from 1.1 million to 1.5 million in August after the Kenya Food Security Steering Group, Long Rains Assessment.
2 2010 August, WASH Baseline Survey, Government of Kenya
5 The country’s ongoing transition to decentralized governance structures provides both opportunities and challenges for humanitarian response and resilience-building. The Government of Kenya has made a commitment to end the worst of the suffering caused by drought by 2022. The actions needed to achieve this are set out in the Drought Risk Management and Ending Drought Emergencies Medium Term Plan (MTP) for 2013-17, which is part of the Kenya Vision 2030 MTP2. With the Government of Kenya, UNICEF is currently co-chairing the pillar on Human Capital (Education, Health, Nutrition, hygiene and sanitation) and contributes to all the other pillars including institutional development and knowledge management. 6 2014 August, UNOCHA East Africa, CERF Underfunded Emergencies Priority Strategies for Kenya. Since January 2014, inter-communal conflicts have displaced more than 200,000 people in several parts of Kenya including in North Eastern Counties like Wajir and Mandera. The Kenya Inter Agency Rapid Assessments (KIRA) tool have been used to identify the humanitarian gaps and also to document the needs of the rights holders, including internally displaced persons. More details: https://kenya.humanitarianresponse.info/local/themes/kira

Humanitarian Action for Children

Total affected population: 1.5 million
Total affected children (under 18): 1.2 million
Total people to be reached in 2015: 1.6 million
Total children to be reached in 2015: 1.2 million

2015 Programme Targets

Nutrition
- 59,817 children under 5 suffering from severe acute malnutrition
- 118,399 children under 5 suffering from moderate acute malnutrition

Health
- 1.2 million children under five years access an integrated package of interventions
- 600,500 children under five access treatment for diarrheal disease

WASH
- 150,000 internally displaced persons and host community members (including approximately 80,000 children) provided with safe water, and 100,000 with appropriate sanitation facilities
- 150,000 emergency-affected persons benefiting from hygiene and sanitation promotion messages

Child Protection
- 60,000 children are provided with safe access to community spaces for socialization, play and learning

Education
- 70,000 school-aged children including adolescents have access to quality education (including through temporary structures)

HIV and AIDS
- 60,000 adolescents have access to HIV education
child-friendly spaces, case
management, HIV education,
psychosocial support and referral
mechanisms for unaccompanied or
separated children and adolescents.
UNICEF is supporting the Government
in the design, pre-testing and
dissemination of key Ebola messages
and roll-out of the Government and UN
Interagency Ebola Preparedness
Contingency plans. Communities will be
empowered through recruitment and
training of community health workers to
deliver key health interventions.
Delivery of an integrated health
interventions package will aim for cost-
effectiveness and optimal utilization
while ensuring a minimal loss of life.
Using an integrated approach, UNICEF
will combine high-impact interventions in
health, such as mass immunizations
with Vitamin-A supplementation and
prevention of mother-to-child
transmission of HIV (PMTCT) services
as part of maternal, newborn and child
health (MNCH) activity. Support will be
provided to establish a needed national
database on children and HIV in
emergencies. Refugees, internally
displaced women and children and
those in areas with high rates of acute
malnutrition will be prioritized for
provision of assistance in WASH,
focusing on schools and health facilities.
An additional 100 temporary learning
centres will be established to incorporate
psychosocial support, provision of
teaching and learning materials and
WASH facilities for boys and girls.

Results from 2014
With 63 per cent (US$22,466,020) of the
US$35,348,146 appeal available at the
end of October, UNICEF maintained
optimum programme coverage,
humanitarian response and capacity-
building for devolved governance, while
advocating for children’s rights in inter-
agency rapid assessments and
contingency planning. UNICEF
supported coordination across five
sectors and was key in resource
mobilization and prepositioning for
humanitarian response. However,
accessibility to needy populations and
monitoring of interventions was affected
by insecurity, especially in Northern
Kenya, while HIV/AIDS, Health and
WASH sectors remained grossly
underfunded. There were also additional
humanitarian needs due to the refugee
influx from South Sudan. Despite these
constraints, about 113,035 children
accessed life-saving nutrition
interventions – of which more than
35,000 were treated for Severe Acute
Malnutrition and 450,000 accessed
preventive high-impact nutrition
services. Case management systems
for child protection reached 9,000
children in Kakuma Refugee Camp and
6,391 children benefited from temporary
learning centres and teaching/learning
materials. The Alternative Basic
Education Programme in Dadaab
refugee camps and host community
benefitted 2,918 children (1,155 male;
1,532 female). During the Kala-azar
disease outbreak in northern Kenya,
1,800 children were treated with
UNICEF-procured drugs. UNICEF also
supported the refugee influx measles
campaign through advocacy,
communication, social mobilization and
vaccine procurement, reaching 114,282
out of 118,000 targeted refugee and
host community children, and reached
8,366,599 out of 8,806,946 targeted
children in the preventive polio
campaign. Approximately 67,000 people
accessed safe water supplies (including
35,000 South Sudanese in Kakuma
refugee camp) and over 57,000 people
received WASH-related information and
training to prevent water-borne
diseases.

Children and women that receive critical WASH-related information to prevent child illness\(^7\) | 385,980 | 103,000 | 200,000 | 57,000***

**CHILD PROTECTION**

Children and women in humanitarian situations accessing protective interventions, including psychosocial support, legal aid and case management | | | 65,000 | 11,150^

**EDUCATION**

Children in humanitarian situations that have access to formal and non-formal education opportunities | 350,000 | 63,601 | 320,250 | 50,059^^

*Results through 31 October 2014 unless stated otherwise*

\(^7\) Includes beneficiaries in Kakuma refugee camp where measles immunization coverage was more than the targeted refugee children population as host community families brought their children to the refugee camp for vaccination. Leveraging of resources provided by UAE government for polio campaigns allowed for high achievement of results, with very limited humanitarian funding.

\(^^\) Includes 35,000 beneficiaries in Kakuma. Limited achievement of target (28.5 per cent) is due to low funding levels in the first half of the year, and under-reporting as some partners have not provided updates. Indicator target has also been reviewed upwards by 33 per cent at mid-year due to increased humanitarian needs.

\(***\) Limited achievement of results partly due to low funding levels. Indicator target has also been reviewed upwards by 33 per cent at mid-year due to increased humanitarian needs.

\(^\) Includes 2,918 Alternative Basic Education beneficiaries and 39,904 for peace education in Kakuma. Limited funding in the first half of the year constrained achievement of results. There has also been an upward revision of the indicator target at mid-year due to increased humanitarian needs.

**Funding requirements**

In line with the country’s inter-agency 2015 Kenya Emergency Response Plan, UNICEF is requesting US$25 million to meet the humanitarian needs of children in Kenya in 2015, including US$5 million for the response to South Sudanese refugees. Without additional sufficient funding, continued gains would be lost, and women and children facing multiple shocks such as food insecurity, malnutrition, disease outbreaks, refugee influx, SGBV and temporary or protracted displacement will not receive timely assistance to support them in fulfilling their basic needs, realising their rights and enhancing their resilience to future shocks.

**Sector** | **2015 Requirements (US$$)**
---|---
Nutrition | 7,500,000
Health | 5,500,000
Water, Sanitation & Hygiene | 2,500,000
Child Protection | 4,500,000
Education | 2,000,000
HIV & AIDS | 1,000,000
Cluster/Sector Coordination | 2,000,000
**Total** | **25,000,000**

7 UNICEF-supported hygiene promotion activities at Kakuma started from July 2014 and implemented through a partnership with Norwegian Refugee Council.
