FAST FACTS – JULY 2016

ETHIOPIA EL NIÑO EMERGENCY

*Following the belg assessment in June 2016, a revision of the Humanitarian Requirements Document is expected to be released in July, with possible needs and funding revisions.

The Situation

- Ethiopia has been experiencing one of the worst droughts in decades. The main rainy season (kiremt rains) that is vital for producing over 80 per cent of Ethiopia’s agricultural yield – in an industry that employs 85 per cent of the country’s workforce – failed in 2015, and a powerful El Niño weather event continues to wreak havoc on children’s lives and their families’ livelihoods.

- Humanitarian needs have more than tripled in the last year. According to the latest 2016 Humanitarian Requirements Document (released in December 2015), more than 10 million people (over 10 per cent of the total population) are now in need of urgent food relief assistance. And this year approximately 6 million children are at risk from hunger, disease and lack of water in Ethiopia as a result of the El Niño related drought.

- Some drought-affected areas received unusually heavy rains in April, May, and June which has led to flash floods and landslides worsening the already dire situation for affected communities. Casualties and injuries have been reported, as well as livestock deaths and road inaccessibility, which has impeded delivery of food and water aid.

- Malnutrition rates have greatly increased – 458,000 children are expected to be treated for severe acute malnutrition, a sharp increase from the 250,000 cases that UNICEF prepares for in a normal year. A further 2.5 million children and pregnant and lactating women are expected to be treated for moderate acute malnutrition.

- Other humanitarian shocks: In a country that already hosts the largest refugee population in Africa (734,931 as of April 2016) there is a concern that the slow onset drought emergency could lead people, particularly pastoralists, to move in search of food, water and pasture from one region to another. As experience tells, this could trigger tensions between various ethnic groups in some regions, as it recently has between Oromo and Somali ethnic groups. It is expected that some 485,000 people will be affected by flooding. Approximately 150,000 people are expected to be displaced due to flooding, drought or conflict, which will lead to critical needs for food, shelter and non-food items.

- How the El Niño related drought in 2016 compares to the Horn of Africa 2011 food crisis: During the Horn of Africa crisis, 4.5 million people in Ethiopia were in need of food aid compared to 10.2 million this year. In 2011, the total severe acute malnutrition (SAM) cases were 328,750 compared to the projected 458,000 cases for 2016. The numbers of refugees being hosted by Ethiopia has more than doubled since 2011 too – approximately 300,000 in 2011, to 737,979 refugees from South Sudan, Somalia, Eritrea, Sudan and elsewhere as of May 2016.

Causes

- Ethiopia is highly vulnerable to climatic hazards – particularly drought and floods. Such hazards and associated disasters are not unique phenomena to Ethiopia, but what makes them unique is the scale of their consequences in terms of loss of life and damage to properties, livelihoods and to the national economy.

- Food insecurity is recurrent and seasonal in Ethiopia; predominantly in the months of February-May, but the situation varies in severity. Based on past experience, Ethiopia has put systems in place to address the needs of the vast majority of Ethiopians affected during recurrent food insecure periods. These include community based management of acute malnutrition (CMAM) services delivered through the Health Extension Programme to treat severe acute malnutrition; the Productive Safety Net Programme, which provides cash and food transfers to 8 million vulnerable beneficiaries; as well as Mobile Health and Nutrition Teams in the Afar and Somali regions.

- However, the El-Nino exacerbated drought is so extreme that this year’s lean season will be much more severe, placing even more pressure on families that are already struggling to cope with food insecurity and lack of clean water.
ETHIOPIA EL NINO EMERGENCY

Implications on Children

• At a time when Ethiopia had made progress for its children across multiple fronts, El Niño threatens to diminish gains made in nutrition, health, child protection and education for millions of children across drought and flood-affected areas. Between 2000 and 2014, child mortality rates were cut by two-thirds in Ethiopia and stunting rates were reduced dramatically from 58 per cent to 40 per cent. However, if the effects of El Nino are not mitigated, millions of children stand to lose out on their health, education, wellbeing and future.

Funding Appeal

• Throughout 2016, the level of humanitarian need in Ethiopia is expected to remain very high, requiring sustained response from the Government, humanitarian agencies and donors. We therefore urge the international community to continue their support and assistance to those in need of emergency assistance in Ethiopia, with the added objective of building resilience in order to save lives.

• UNICEF is appealing for urgent funds for the scale-up of humanitarian activities in 2016 in Ethiopia, including for hundreds of thousands of refugee children. The funding gap urgently needs to be covered in order to continue providing life-saving Nutrition, WASH and Health as well as Education and Child Protection services to keep children in school and safe from violence, exploitation and abuse. Child Protection and Education are currently the most underfunded areas.

• The UNICEF 2016 Humanitarian Action for Children (HAC) appeal for Ethiopia is for US$106 million, of which approximately US$99.7 million has been raised. Out of the total UNICEF HAC appeal, US$97.5million is for the drought response, but this figure will be revised upwards shortly due to increased needs. The overall funding requirement as per the joint Government and partners’ Ethiopia Humanitarian Requirements Document for 2016 is US$1.5 billion.
Humanitarian Strategy: Partnerships and Prepositioning

- The Government of Ethiopia is leading the humanitarian response, supported by partners including UNICEF, WFP, OCHA, NGO partners and donors. A coordinated response by the Government and its key international development partners, including UNICEF, is vital throughout 2016.

- In line with its core commitments for children in humanitarian action, UNICEF is supporting the Government in scaling-up its response to mitigate the impact of the current drought on children and women and working closely with the Government and partners to ensure that children have access to education, health and nutrition care, safe water, sanitation and hygiene services, and protection support during emergencies.

- UNICEF commends the Government of Ethiopia for building the resiliency of their nation to mitigate the shock of food insecurity, drought and flood as well as their efforts to host and provide a safe place for refugees from Somalia, Sudan, South Sudan and Eritrea.

- Prepositioned supplies: To respond to any rapid onset crisis in a timely manner, UNICEF has prepositioned stocks in Addis Ababa and at two regional hubs to address the needs of 120,000 people. These stocks include essential supplies such as emergency drug kits, water treatment/purification chemicals, ready-to-use therapeutic food, school-in-a-bag kits, tents and non-food items. UNICEF is currently mobilizing additional resources to procure additional emergency shelter and non-food items. These supplies will be used to provide immediate assistance to drought-affected and flood-affected populations based on requests from regional governments. UNICEF has established long-term agreements with suppliers of key emergency supplies and for drilling shallow boreholes, which enables urgent response as needed.

UNICEF Emergency Response

Child protection – children at risk:
- UNICEF has been implementing child protection in emergencies drought response in six regions since March 2016 and 70 per cent of the funding requirement of UNICEF has been achieved. The implementing partners include the Ethiopian Ministry of Women’s and Children’s Affairs, the Ethiopian Bureau of Labour and Social Affairs, Child Fund, and Save the Children.
- UNICEF provides child protection in emergency services including psychosocial support through child friendly spaces, identification and referral of children at risk of or victims of abuse, violence and exploitation, and through working with communities to prevent and/or respond to family separation, at-risk migration, child marriage, gender based violence and other protection issues.

Education – disruption in learning:
- UNICEF is a co-coordinating agency for the Emergency Education cluster, supporting the Ministry of Education to ensure that assistance across the six affected regions is efficiently targeted and delivered. An essential component of this is the gathering and analysis of data on the impact of the drought on schools and educational institutions to inform a sector-wide emergency response plan. UNICEF recruited and deployed an education cluster coordinator in order to strengthen Ministry of Education and regional education coordination capacity to respond to the emergency.
- UNICEF assists the Regional Education Bureaus in six regions with the provision of primary school teaching and learning materials, temporary learning spaces, WASH services to schools as well support to offset the additional costs schools are bearing to stay open during the drought. Further, communities hosting displaced families and their children have been provided with temporary learning facilities, attached to existing primary schools, in order to accommodate increased numbers of school children.
- UNICEF has advocated for the Government to support school feeding programmes and the Government has commenced these programmes in Priority 1 woredas (districts) in the six affected regions.
- As a response to acute watery diarrhea emergency, UNICEF distributed brochures and posters to the Addis Ababa Regional Education Bureau for distribution in schools, as well as to sub-cities and woredas to help protect school children from being infected by the disease.
ETHIOPIA EL NINO EMERGENCY

Nutrition:
- UNICEF, the Nutrition cluster lead, coordinates the overall nutrition emergency response and provides nutrition supplies including ready-to-use therapeutic food (RUTF), F-75 and F-100 therapeutic milk and drugs for the treatment of children with severe acute malnutrition. UNICEF has procured 543,631 cartons of RUTF for the treatment of SAM in this drought response, in preparation for the anticipated increase in SAM caseload. This is one of the largest purchases of RUTF for a country in UNICEF history and represents 22 per cent of the global order for 2015. To date in 2016, UNICEF has procured a further 73,344 cartons of RUTF out of a global procurement estimated at 565,623 cartons, which corresponds to 13 per cent of the global supply.
- UNICEF supports the treatment of malnourished children through the community-based management of acute malnutrition (CMAM), along with training, quality assurance (supervision) and coordination with other partners. Regular nutrition screening helps ensure that malnutrition in children is caught and treated early, thereby reducing cases of severe acute malnutrition and life-threatening complications.
- UNICEF supports bi-annual nutrition surveys that are conducted in the six drought-affected regions, Amhara, Afar, Tigray, Oromia, Somali and SNNP.
- UNICEF supports training to strengthen infant and young child feeding in emergencies (IYCF-E) as part of CMAM and supports promotion of good IYCF practices through community based nutrition, mother-to-mother counselling and public outreach using local radio.
- UNICEF continues to provide support for countrywide, twice a year vitamin A supplementation among children 6 to 59 months and deworming of children 24 to 59 months, as well as support for Ethiopia food fortification, including universal salt iodization efforts.

Health – preventing and responding to disease outbreaks:
- UNICEF and partners support the Ministry of Health and Regional Health Bureaus to maintain a minimum level of preparedness against increased health hazards from drought and flooding, to improve case management and to build the capacity of the health system to effectively respond to and recover from the emergency and ensure improved access to health care services.
- UNICEF provides financial support, supplies (vaccines and medicines) and technical assistance to partners (including supporting training for health workers) for the prevention of major causes of child illnesses and deaths such as acute watery diarrhoea and other diarrhoeal diseases, vaccine preventable diseases like measles, as well as other diseases such as scabies and meningitis. In response to outbreaks of acute watery diarrhea, UNICEF has supported the cost of running treatment centres as well as provided supplies which include drugs and 73 case treatment center (CTC) kits to Addis Ababa Regional Health Bureau, as well as SNNP, Somali and Tigray regions. Each kit is composed of 10 beds for inpatients, medical supplies, tents, water containers, chemical sprayers with disinfectant and cleaning supplies. The kits are used to establish temporary clinics to isolate and treat patients with acute watery diarrhea.
- UNICEF supports mobile health and nutrition interventions and teams in the Somali and Afar regions for pastoralist communities, which are providing medical consultations and essential life-saving preventive interventions including for children under five and pregnant and lactating women.

WASH:
- UNICEF as WASH cluster lead supports the Government and WASH cluster in the collection of real time information on the status of water supply facilities in some of the most drought-affected communities, which helps in triggering rapid response to address urgent needs.
- UNICEF supports the rehabilitation, maintenance and upgrade of water supply systems (including wells and boreholes) and provides household water purification and treatment chemicals to increase access to clean water for drought-affected and flood-affected people.
- UNICEF works to increase access to improved water and sanitation facilities in schools and health facilities and to increase awareness of good hygiene and sanitation in communities especially those affected by public health emergencies such as scabies and acute watery diarrhea.
- UNICEF supports the Government in scaling up water trucking activities in chronically affected areas to fill gaps while the rehabilitation of non-functional water supply systems is carried out.
ETHIOPIA EL NINO EMERGENCY

- WASH in schools programmes are being provided in Priority 1 woredas to reduce the rate of school dropouts and to provide sanitation and hygiene facilities to reduce the incidence of disease outbreaks.

Background of UNICEF in Ethiopia
UNICEF Ethiopia’s cooperation with Ethiopia began in 1952 and the office was established in 1958. Since then, UNICEF has continued to work closely with the Government of Ethiopia and other partners in the realisation of the rights of the children and women in Ethiopia based on the programmes and projects developed and agreed upon by the Government of Ethiopia and UNICEF. UNICEF works in all regions of the country in the areas of Health, Nutrition, WASH, Education and Child Protection and will continue this work under the new Country Programme (July 2016 – June 2020).

UNICEF and partners
UNICEF Ethiopia works with partners including governments, UN agencies, NGOs and communities to provide emergency relief in line with the Core Commitments for Children in emergencies. Among its key donors and partners are the Governments of Canada, Germany, Japan, Italy, Sweden, United Kingdom and the United States, HRF, CERF, ECHO and EU among others, as well as UNICEF National Committees.
