

Introduction

This provincial snapshot highlights priority child-related Sustainable Development Goals (SDG) indicators, based on national household surveys and other data sources. It complements the national *SDG Baseline Report on Children in Indonesia* produced by BAPPENAS and UNICEF, to support monitoring and evidence-informed policy making.

The Bangka Belitung Islands (*Kepulauan Bangka Belitung*) are a youthful province. Its 461,000 children represent 34 per cent of the total population. Nearly half of all children live in urban areas. Increased strategic investments in children are required to fast-track achievement of the SDGs for the province.

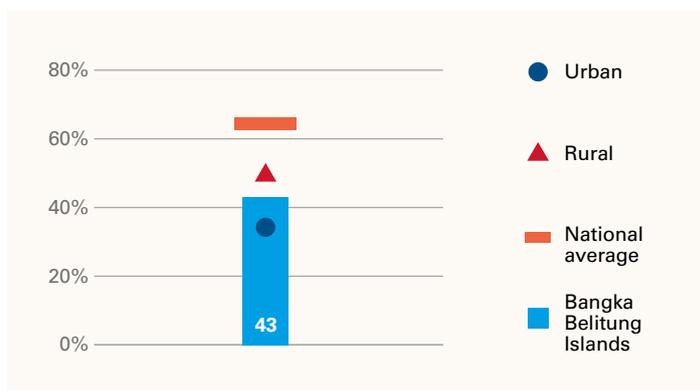

GOAL 1 NO POVERTY

Close to 31,000 children (6.6 per cent) were living below the official poverty line in 2015 (Rp 16,067 per person per day). Many more families are insecure and live on incomes that are only marginally higher. In addition, 43 per cent of children experienced deprivations in two or more non-income dimensions of poverty, with persistent disparities between urban and rural areas.¹

Multidimensional child poverty in the Bangka Belitung Islands

	Per cent	Number
Population below national poverty line	5.4	74,000
Children < 18 below national poverty line	6.6	31,000
Children < 18 below twice the poverty line	59.4	274,000

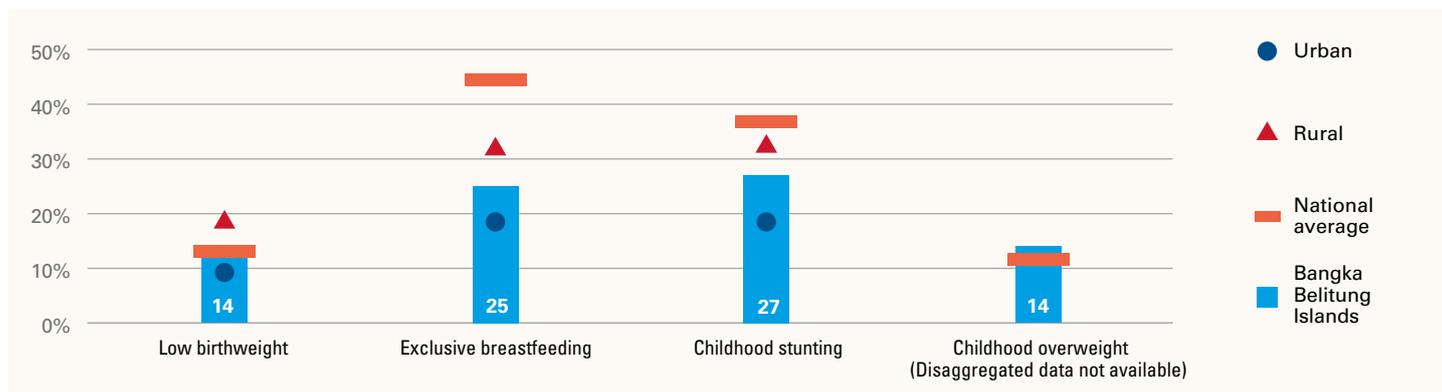

GOAL 2 ZERO HUNGER

Adopting optimal feeding practices is fundamental to a child's survival, growth and development. Only one in four infants is exclusively breastfed for the first six months of life, which is the lowest rate in the country.

The prevalence of malnutrition is relatively high, especially in rural areas, even though the province performs better than the national average. Some 14 per cent of newborns have a low birthweight, and more than a quarter of children under five were stunted (low height for their age) in 2013.

Geographic disparities in child feeding and nutrition outcomes

GOAL 3 GOOD HEALTH AND WELL-BEING

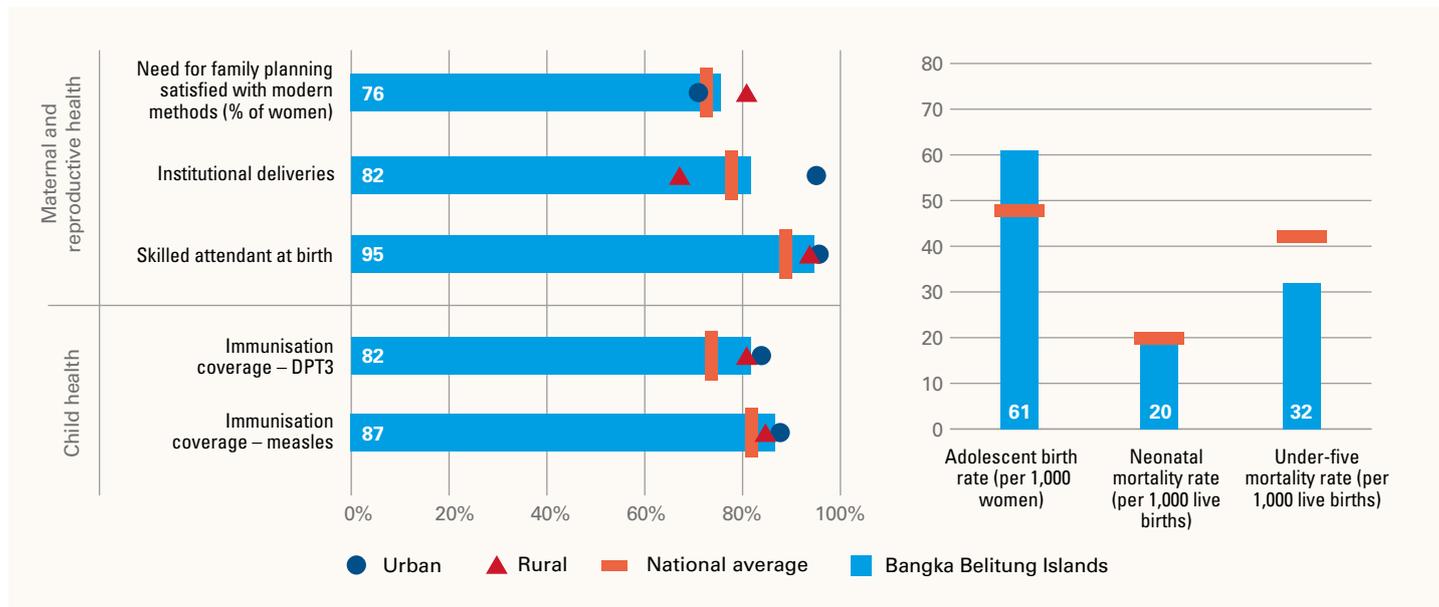

Despite progress, child mortality remains a challenge. For every 1,000 live births, 20 newborn babies died in their first month of life and 32 before their fifth birthday.

Most women have access to delivery care and 95 per cent of births occurred with assistance from a skilled attendant. However, there is scope to further improve the coverage of

reproductive health services, including scaling up access to modern family planning methods.

Over four in five infants received the recommended three doses of DTP vaccine and 87 per cent were vaccinated against measles in 2015. Continued efforts are needed to reach and sustain high immunisation coverage in rural and urban areas.

Geographic disparities in maternal and child health

GOAL 4 QUALITY EDUCATION

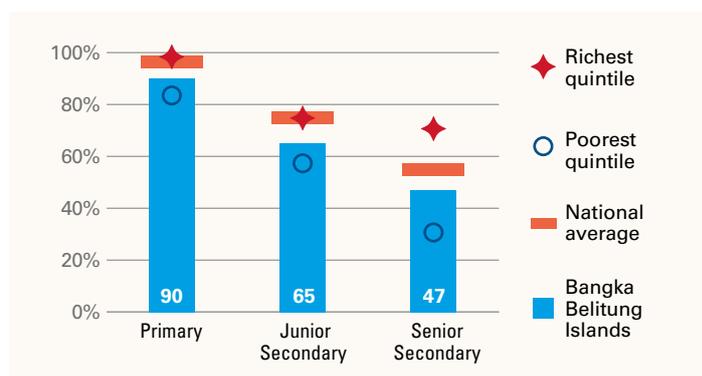

Children's school readiness can be improved through early childhood development programmes. The participation rate in organised learning among 6-year-olds was 95 per cent in 2015, though most pre-school children are already in primary school.

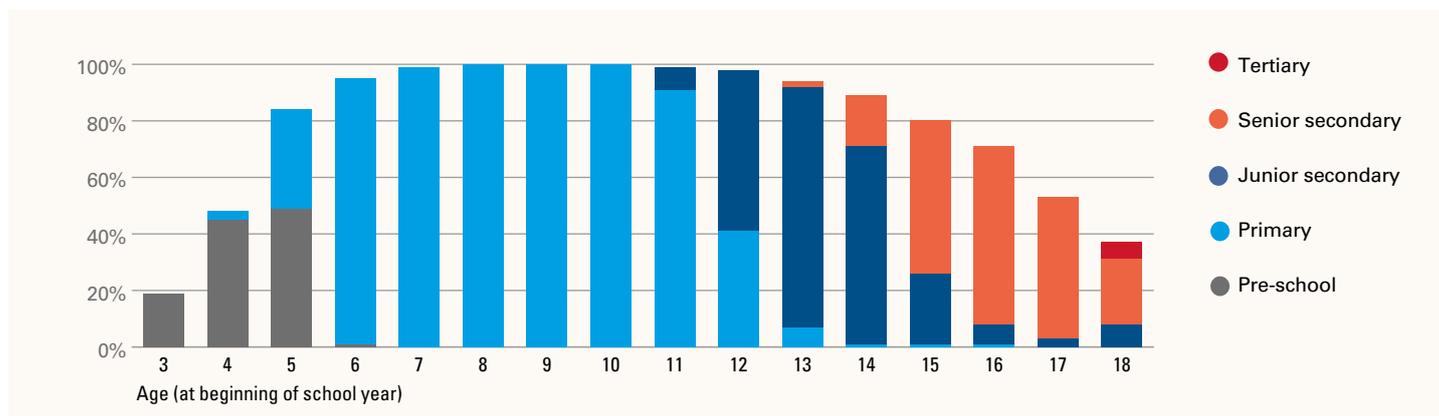

The Bangka Belitung Islands have achieved near-universal access to primary education. However, children from the poorest households are much less likely to complete secondary school compared with their affluent peers.

Quality of education remains a key concern. Even though the province performs above the national average, only six in ten primary school children achieved the minimum national benchmark in reading and a quarter in mathematics.

Wealth disparities in school completion rates

Percentage of children attending school, by age

GOAL 5 GENDER EQUALITY

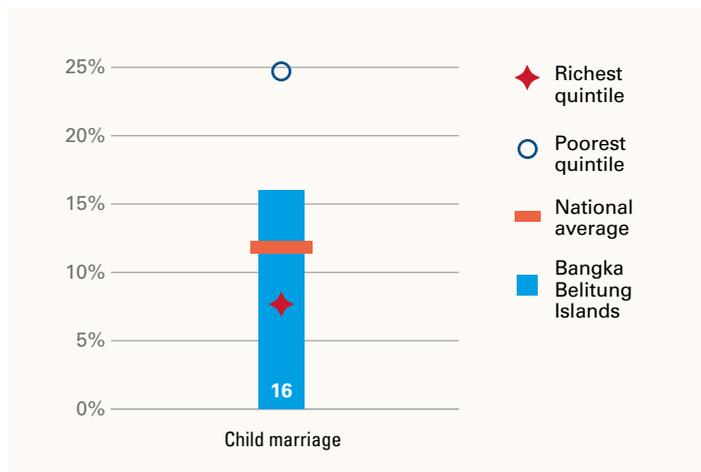

The practice of child marriage is declining. In the Bangka Belitung Islands, 16 per cent of women aged 20–24 years were married or in union before the age of 18 in 2015. Levels of child marriage are much higher among girls from the poorest households.

No representative data are available on violence against girls and women at provincial level. Evidence from a national survey indicates, however, that such violence is widespread: 28 per cent of ever-partnered women and girls experienced physical, sexual and/or psychological violence by a current or former intimate partner.

Wealth disparities in child marriage

GOAL 6 CLEAN WATER AND SANITATION

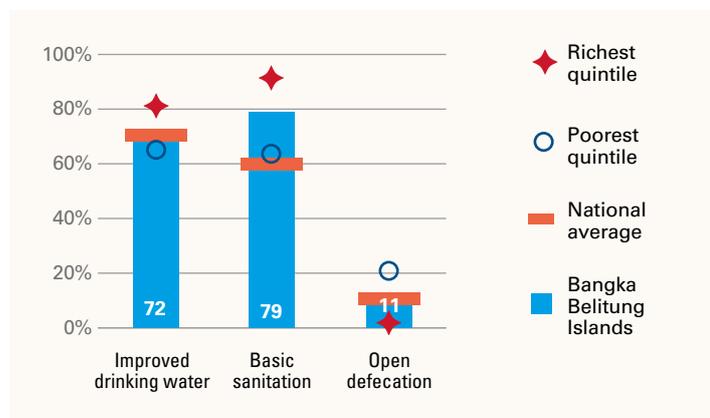

Achieving universal access to drinking water, sanitation and hygiene is crucial to further progress in health, education and poverty eradication. Nearly 80 per cent of the population used a basic sanitation facility at home in 2015, while one in 10 practised open defecation. The coverage of improved drinking water sources is on par with the national average.² A majority of schools have sex-

separated toilet facilities and access to basic water services.

Disparities based on wealth and place of residence are pronounced, pointing to the importance of integrating equity considerations into policy and practice. Progress is being made through the implementation of the community-based total sanitation programme.

Wealth disparities in access to water and sanitation

Schools with basic water services = 90%

Category	Percentage (%)
Schools with basic water services (%)	90
Schools with sex-disaggregated sanitation facilities (%)	81
Villages and wards implementing community-based total sanitation (%)	75

GOAL 16 PEACE, JUSTICE AND STRONG INSTITUTIONS

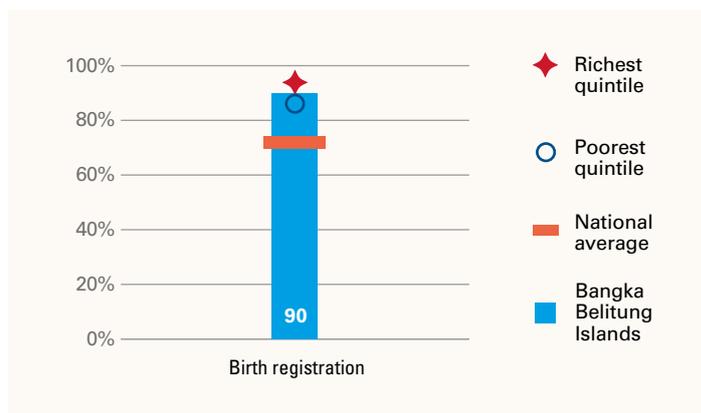

Progress is ongoing in improving levels of birth registration: Nine out of 10 children under 5 years of age had a birth certificate in 2015. There are differences between urban and rural areas and based on households' wealth status, due to financial and supply-side barriers.

Deprivation of liberty remains a common form of punishment for juvenile offenders, in violation of the principle that this should be a measure of last resort. In the Bangka Belitung Islands, 13 per cent of all children in detention were unsentenced, which is better than in most other provinces.

Little or no data is available on other child protection issues, such as violence against children and trafficking.

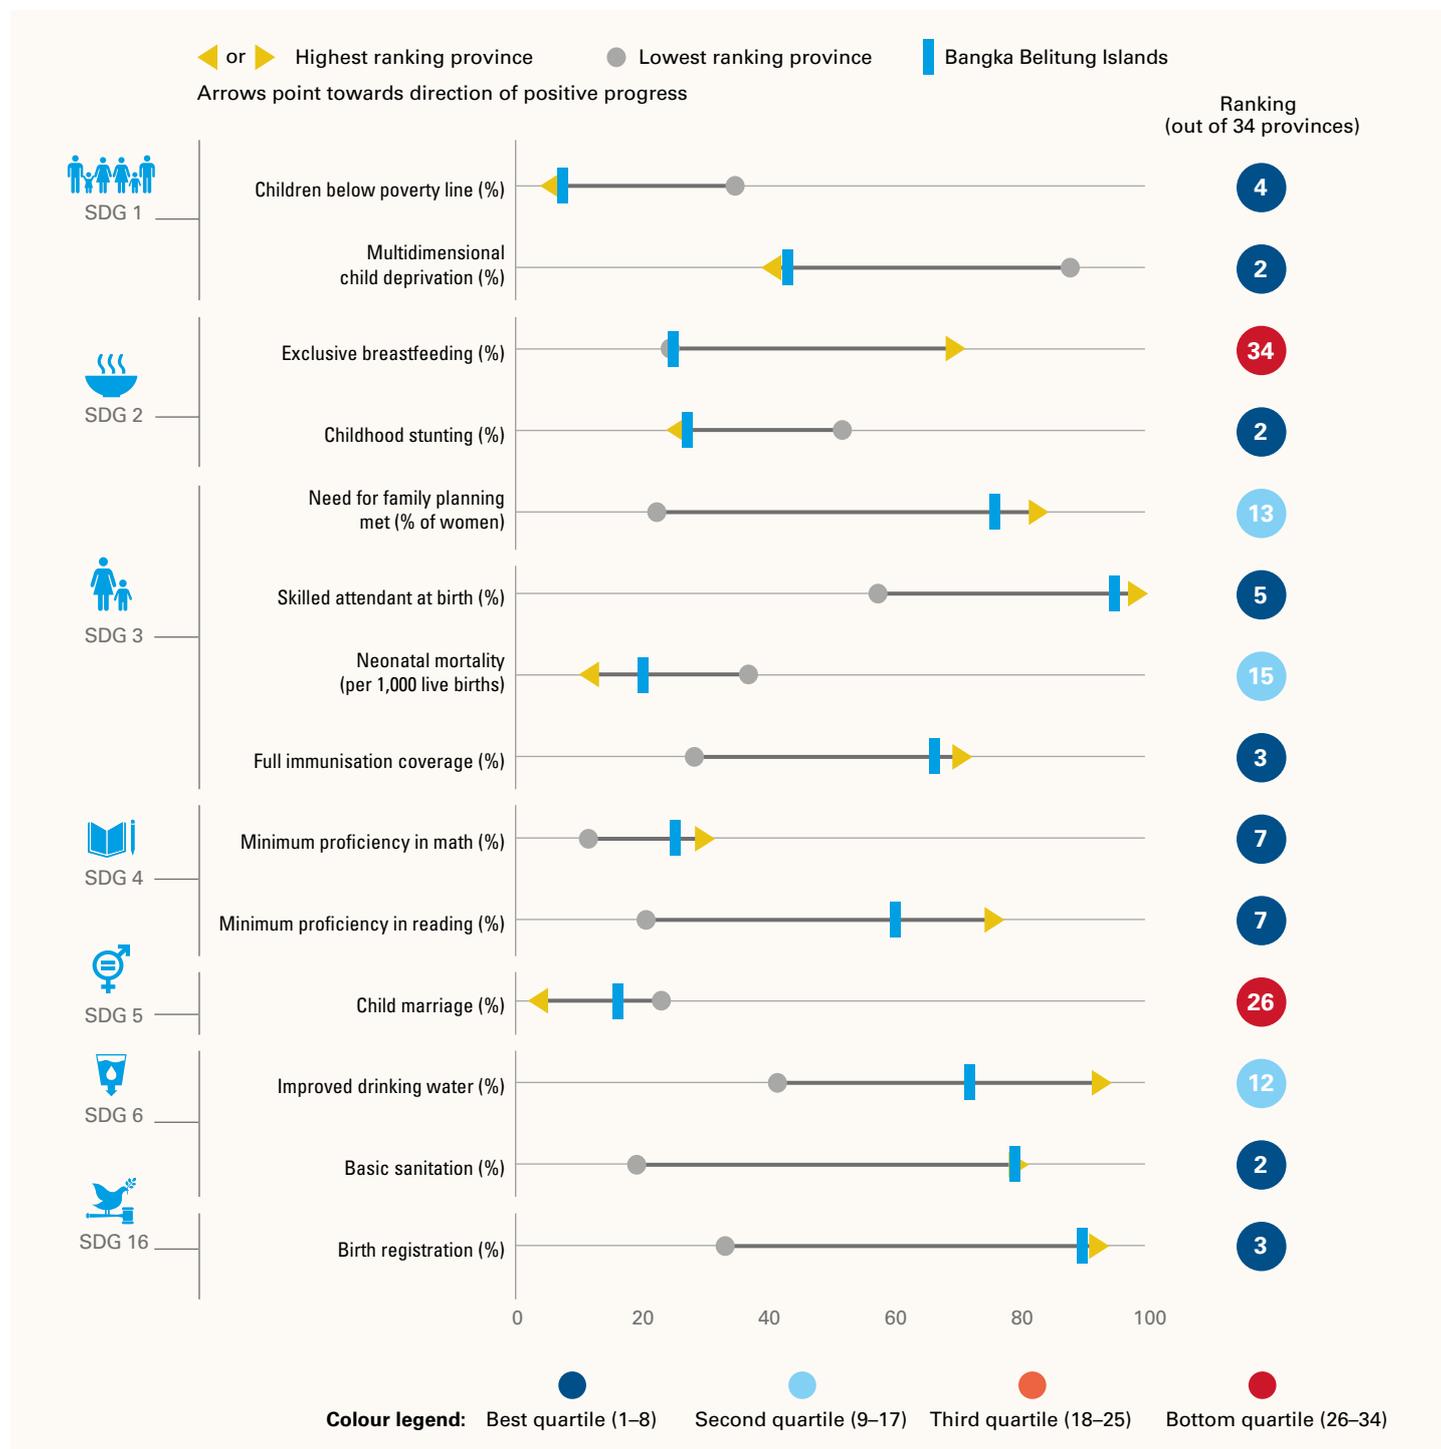

Wealth disparities in birth registration

PROVINCIAL SCORECARD

The scorecard summarises the Bangka Belitung Islands' performance for a selection of SDG indicators compared to other provinces in the country. For each indicator, the graph shows the Bangka Belitung Islands' average value as well as the provinces with the highest and the lowest data value.

On the right side of the scorecard the Bangka Belitung Islands' rank for each indicator is shown, ranging from 1 for the highest performer to 34 for the lowest. Provinces are divided into four quartiles (blue for the highest ranking and red/orange for the lowest ranking provinces).

Notes

Sources: National household surveys (SUSENAS, RISKESDAS, IDHS) and administrative data (Ministry of Education and Culture, Ministry of Health). Detailed information on data sources and indicator definitions is available online at: <https://sdg4children.or.id>

- Multidimensional child poverty is defined as children who experience deprivations in at least two of the following dimensions: food and nutrition; health; education; housing; water and sanitation; and protection.
- Indonesia does not yet have nationally representative data on water quality that can be used to calculate the SDG indicator on the use of safely managed drinking water services. Instead, a nationally-defined proxy measure is used to set a baseline for SDG 6.
