

Introduction

This provincial snapshot highlights priority child-related Sustainable Development Goals (SDG) indicators, based on national household surveys and other data sources. It complements the national *SDG Baseline Report on Children in Indonesia* produced by BAPPENAS and UNICEF, to support monitoring and evidence-informed policy making.

Central Java (*Jawa Tengah*) is a youthful province. Its 10.3 million children represent 30 per cent of the total population. Just over half of children live in rural areas. Increased strategic investments in children are required to fast-track achievement of the SDGs for the province.

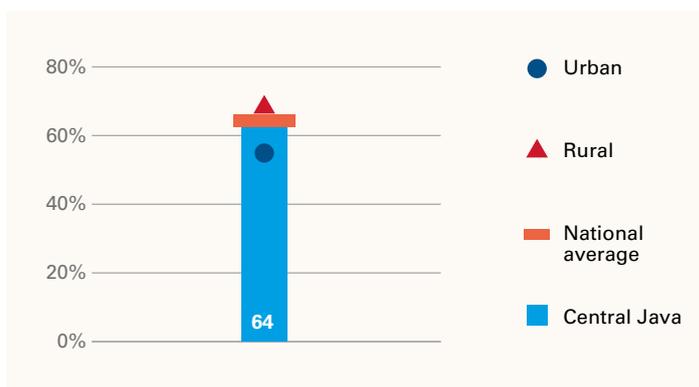

GOAL 1 NO POVERTY

Around 1.5 million children (15 per cent) were living below the official poverty line in 2015 (Rp 9,792 per person per day). Many more families are insecure and live on incomes that are only marginally higher. In addition, 64 per cent of children experienced deprivations in two or more non-income dimensions of poverty, with persistently high numbers in rural and urban areas.¹

Multidimensional child poverty in Central Java

	Per cent	Number (millions)
Population below national poverty line	13.6	4.6
Children < 18 below national poverty line	15.0	1.5
Children < 18 below twice the poverty line	65.0	6.7

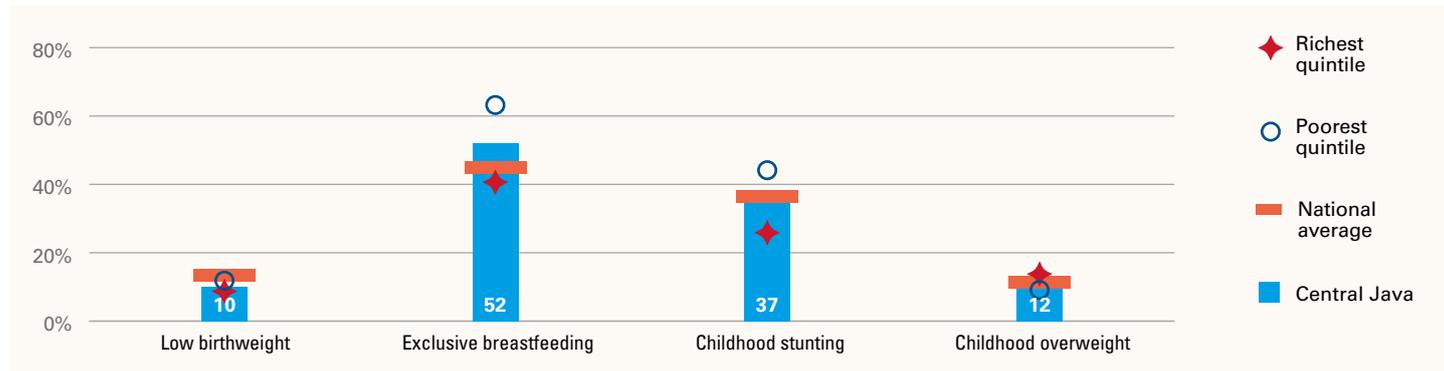

GOAL 2 ZERO HUNGER

Adopting optimal feeding practices is fundamental to a child's survival, growth and development. More than half of infants were exclusively breastfed for the first six months of life, which is above the national average.

The prevalence of malnutrition is relatively high, including among those in more affluent households. One in 10 newborns have a low birthweight, and 37 per cent of children under five were stunted (low height for their age) in 2013.

Wealth disparities in child feeding and nutrition outcomes

GOAL 3

GOOD HEALTH AND WELL-BEING

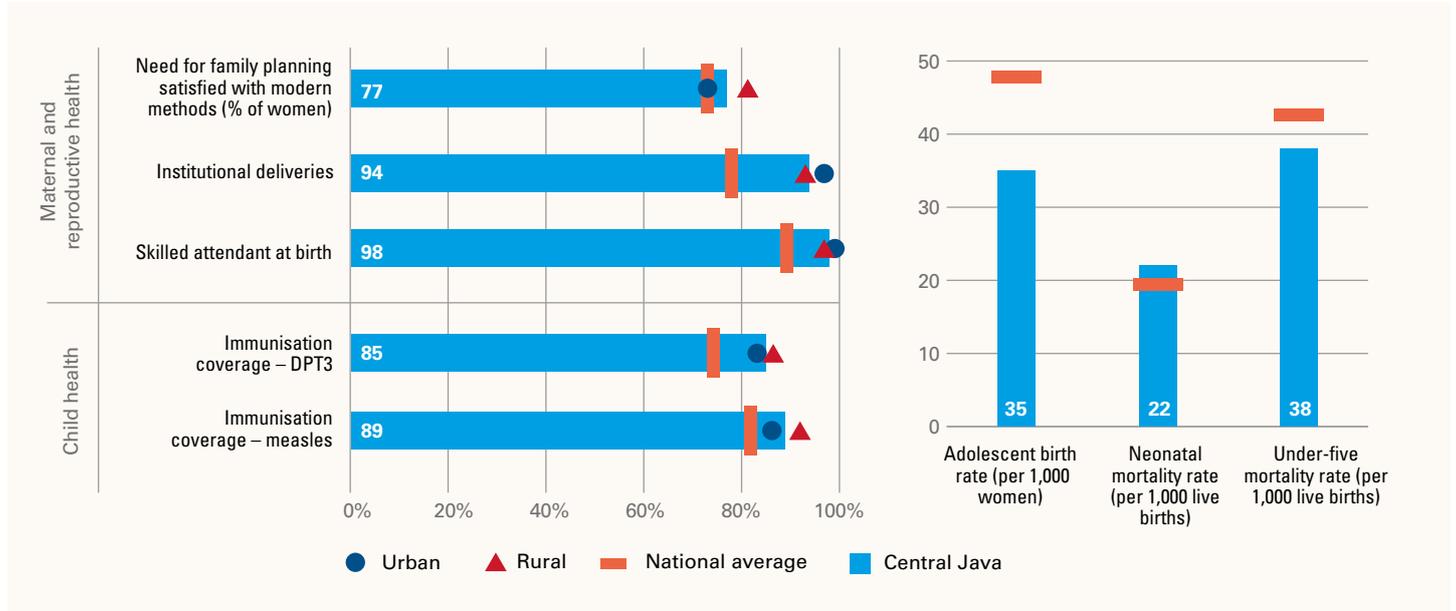

Despite progress, child mortality remains a challenge. For every 1,000 live births, 22 newborn babies died in their first month of life and 38 before their fifth birthday.

Most women have access to delivery care, with 98 per cent of births occurring with assistance from a skilled attendant. There is scope to further improve the coverage of reproductive health

services, especially universalising access to modern family planning methods.

Eighty-five per cent of infants received the recommended three doses of DTP vaccine and nearly nine out of 10 were vaccinated against measles in 2015. Continued efforts are needed to sustain high immunisation coverage in rural and urban areas.

Geographic disparities in maternal and child health

GOAL 4

QUALITY EDUCATION

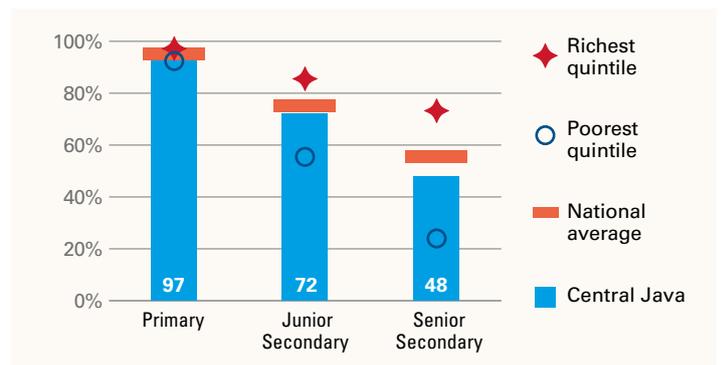

Children's school readiness can be improved through early childhood development programmes. The participation rate in organised learning among 6-year-olds was 98 per cent in 2015, though many pre-school children are already in primary school.

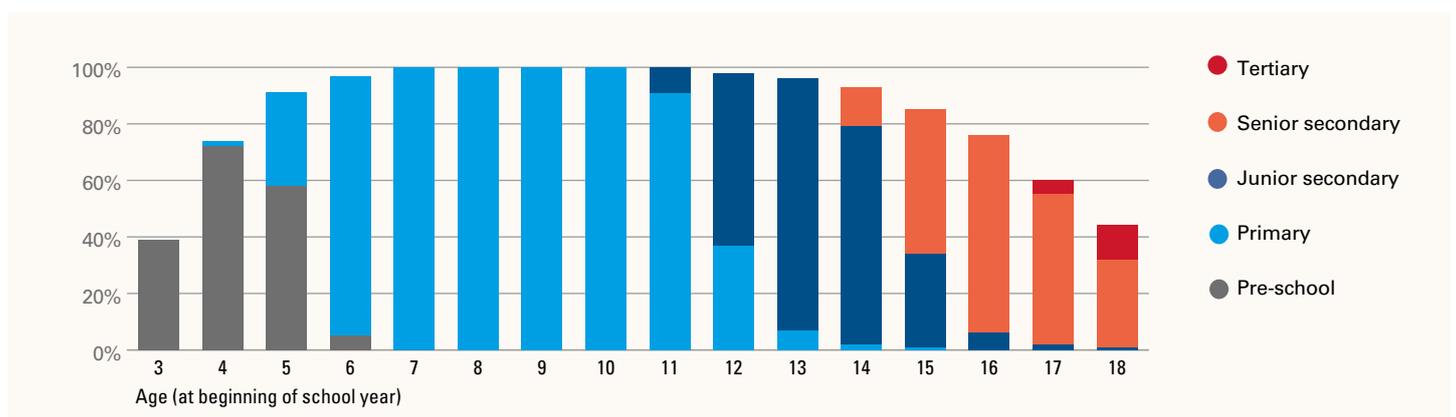

Central Java has achieved near-universal access to primary education. However, children from the poorest households are three times less likely to complete secondary school compared with their most affluent peers.

Quality of education is a key concern. Only six out of ten primary school children achieved the minimum national benchmark in reading and less than a quarter in mathematics.

Wealth disparities in school completion rates

Percentage of children attending school, by age

GOAL 5 GENDER EQUALITY

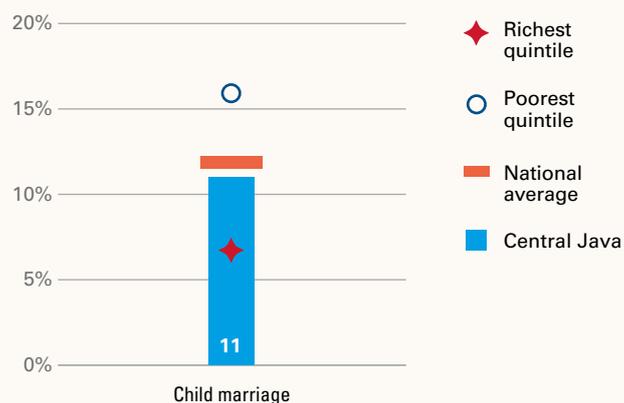

The practice of child marriage is declining. In Central Java, some 11 per cent of women aged 20–24 years were married or in union before the age of 18 in 2015. Levels of child marriage are higher among girls from the poorest households.

No representative data are available on violence against girls and women at provincial level. Evidence from a national survey indicates, however, that such violence is widespread: 28 per cent of ever-partnered women and girls experienced physical, sexual and/or psychological violence by a current or former intimate partner.

11% of women  are **married** before **18**

Wealth disparities in child marriage

GOAL 6 CLEAN WATER AND SANITATION

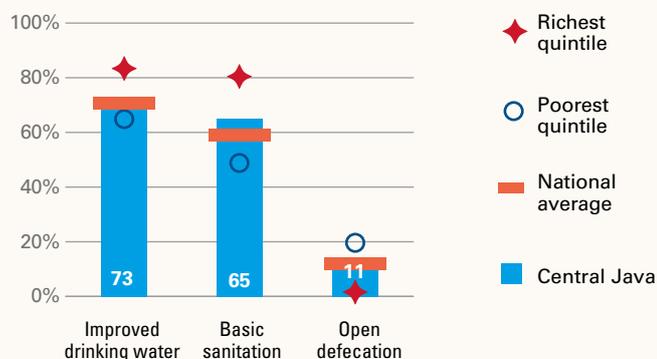

Achieving universal access to drinking water, sanitation and hygiene is crucial to further progress in health, education and poverty eradication. Two out of three people used a basic sanitation facility at home in 2015, while 11 per cent practised open defecation. About 62 per cent of schools have sex-separated toilet facilities. The coverage of improved drinking

water sources is higher, both in households and schools.²

Disparities based on wealth and place of residence are pronounced, pointing to the importance of integrating equity considerations into policy and practice. Progress is being made through the implementation of the community-based total sanitation programme.

Wealth disparities in access to water and sanitation

School environment

Schools with basic water services (%)	96
Schools with sex-disaggregated sanitation facilities (%)	62

Community

Villages and wards implementing community-based total sanitation (%)	48
--	----

GOAL 16 PEACE, JUSTICE AND STRONG INSTITUTIONS

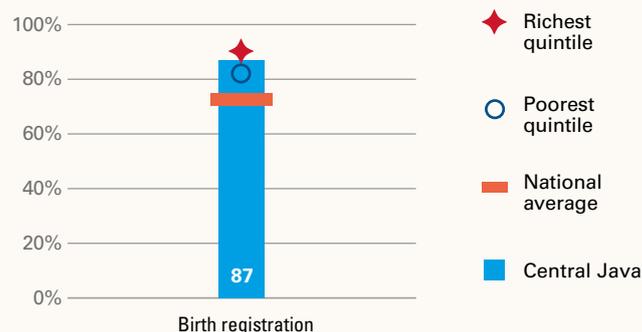

Progress is ongoing in improving levels of birth registration. In 2015, 87 per cent of children under 5 years of age had a birth certificate. There remain, however, some differences between urban and rural areas and based on households' wealth status, due to financial and supply-side barriers.

Deprivation of liberty remains a common form of punishment for juvenile offenders, in violation of the principle that this should be a measure of last resort. In Central Java, 22 per cent of all children in detention were unsentenced, which is similar to the national average.

Little or no data is available on other child protection issues, such as violence against children and trafficking.

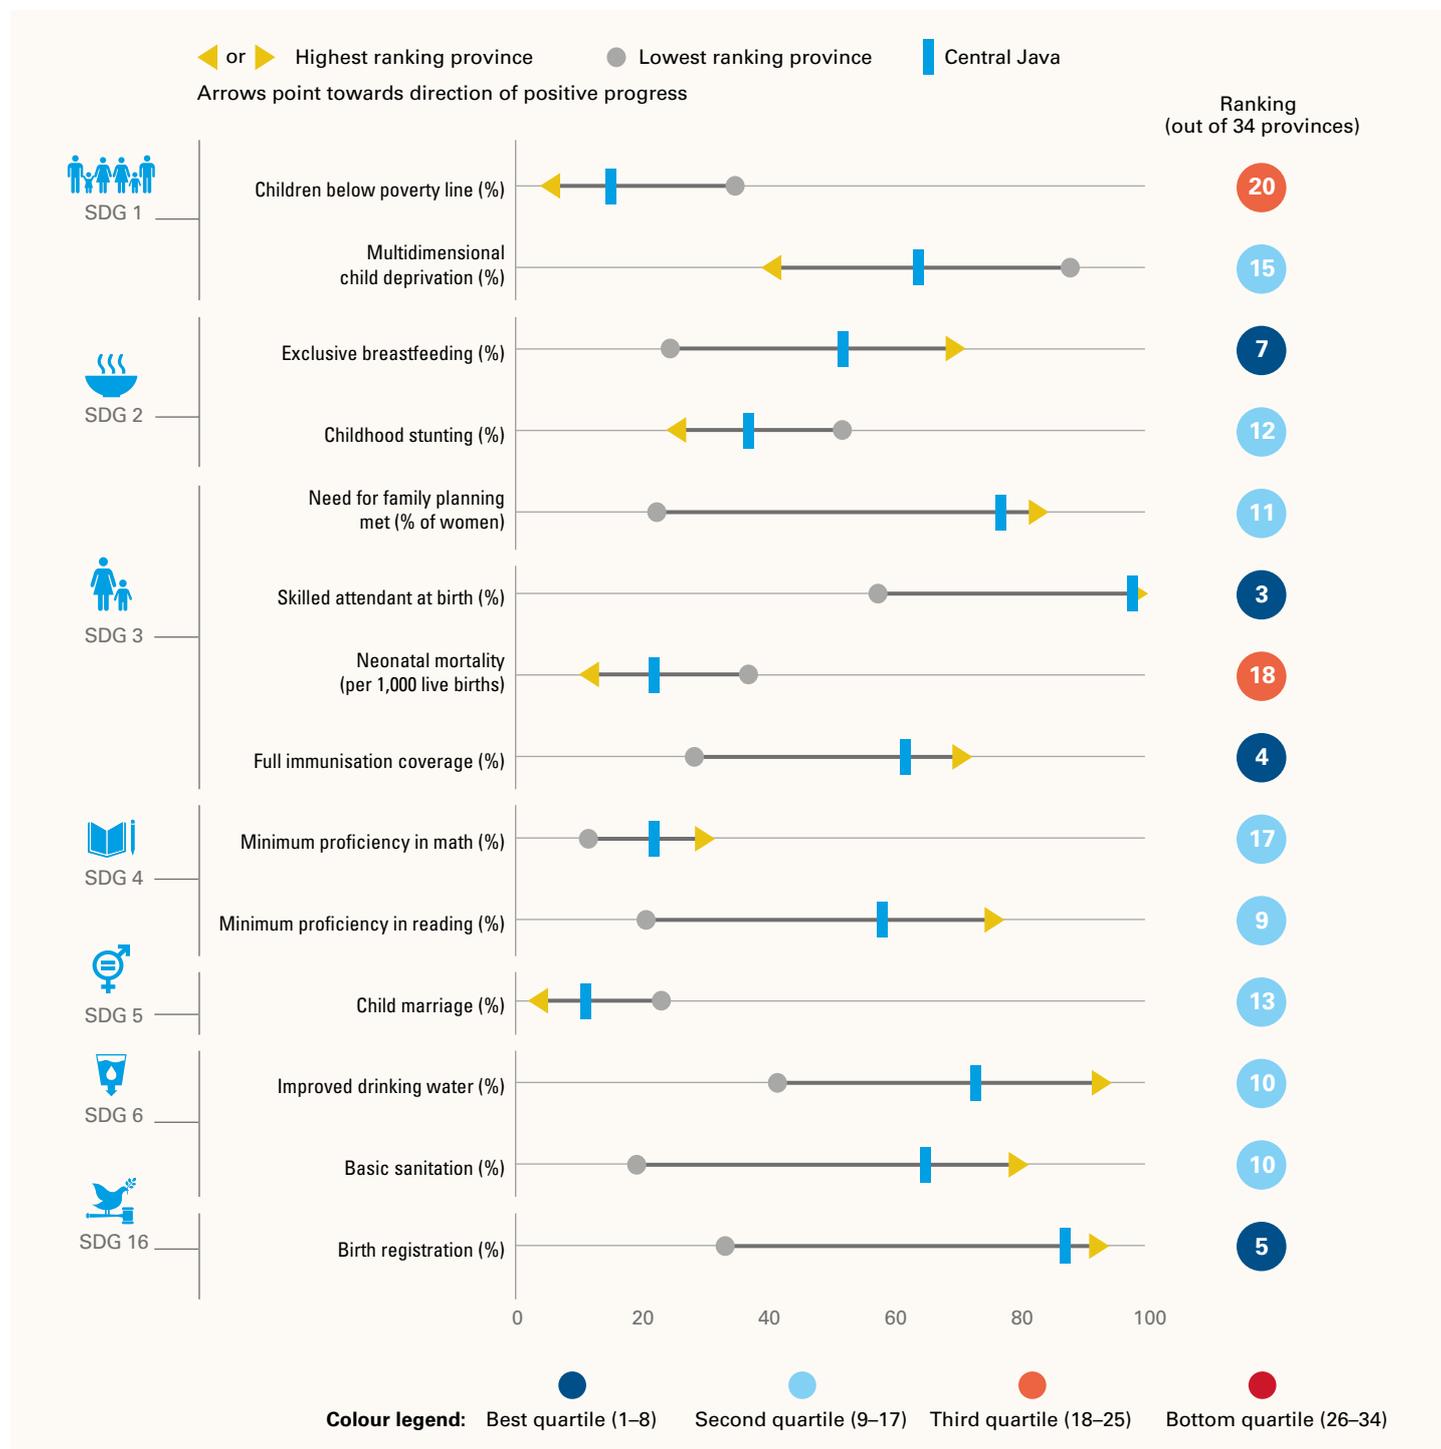

Wealth disparities in birth registration

PROVINCIAL SCORECARD

The scorecard summarises Central Java's performance for a selection of SDG indicators compared to other provinces in the country. For each indicator, the graph shows Central Java's average value as well as the provinces with the highest and the lowest data value.

On the right side of the scorecard Central Java's rank for each indicator is shown, ranging from 1 for the highest performer to 34 for the lowest. Provinces are divided into four quartiles (blue for the highest ranking and red/orange for the lowest ranking provinces).

Notes

Sources: National household surveys (SUSENAS, RISKESDAS, IDHS) and administrative data (Ministry of Education and Culture, Ministry of Health). Detailed information on data sources and indicator definitions is available online at: <https://sdg4children.or.id>

- Multidimensional child poverty is defined as children who experience deprivations in at least two of the following dimensions: food and nutrition; health; education; housing; water and sanitation; and protection.
- Indonesia does not yet have nationally representative data on water quality that can be used to calculate the SDG indicator on the use of safely managed drinking water services. Instead, a nationally-defined proxy measure is used to set a baseline for SDG 6.
