Sustainable Development Goal 5 - Target 5.3 - aims to eliminate all harmful practices, including child marriage by 2030. Even though child marriage prevalence in Indonesia remains high, the Government of Indonesia is committed to achieving this target.

```
All data is based on the 2018 annual Socio-Economic Survey
(SUSENAS), which monitors child marriage trends
as well as associated factors
```

PREVALENCE OF CHILD MARRIAGE IN INDONESIA

## GEOGRAPHICAL SPREAD OF CHILD MARRIAGE PREVALENCE UNDER AGE 18

West Sulawesi has the highest prevalence at $19.43 \%$ while West Java has the highest absolute numbers, approximately 273,300 child marriages*.

Absolute number is obtained from multip
with 2015 SUPAS population projection

## $\begin{array}{ll}0 \\ 0 \\ 0 \\ 0 & 0 \\ 0 & 0 \\ 0\end{array}$ Households With Lower Quintile Of Expenditure

Girls* from households with the lowest levels of expenditure are almost three times more likely to be married before age 18 than girls from households with the highest levels of expenditure.

Low Household Education

Women aged 20-24 years old who marry before age 18 are four times less likely to have finished senior high school compared to those who marry after age 18 .
in 2018, approximately $11 \%$ or

## 1H1 9 women

aged 20-24 were married before 18
in 2018, approximately $1 \%$ or
1 in 100 men
aged 20-24 were married before 18

It is estimated that there are
1,220,900
girls married under 18*
Among $20-24$-year old females who were married before age 18 in 2018 , from multiplying child
marriage prevalence with 2015 SUPAS population projection.
likely to m to girls in urban areas.

## LEGAL FRAMEWORK

While the legal age of marriage (without parental consent) is 21 according to the Marriage Law no. 16 year 2019, marriage dispensation allows for children to get married at an earlier age.

## GLOBAL IMPACT

Complications during pregnancy during pregnancy
and childbirth are and childbirth are
the leading cause of death for girls between ages 15 and 19*
-who. Global Health WHO. GIIobal Heath
Estimates (GHE), 2016 .

Babies born to mothers under age 20 are almost 2 times more likely to die during the first 28 days than babies born to mothers aged 20-29*
