

Children attending classes at the primary school of Gado Badzere, in the East of Cameroon  
@UNICEF Cameroon/2021 Frank Dejongh

Reporting Period: May 2021

## Highlights

- As of May 2021, Cameroon has the fourth highest fatality rate for COVID-19 in Africa. Vaccine demand is extremely low. Out of the 391,200 COVID-19 vaccine doses received via COVID-19 Vaccine Global Access (COVAX), only 36,191 AstraZeneca doses were administered.
- Since January 2021, 14,592 conflict affected children have received measles vaccinations in the NW/SW regions. In the Far-North region, 8,797 children with severe acute malnutrition have been admitted to a treatment center in May. In the East region, 16,955 people accessed safe channels to report sexual exploitation and abuse.
- The HAC 2021 remains significantly underfunded. Without additional resources, UNICEF Cameroon will not be able to provide mental and psychosocial services to children with immediate, lifesaving needs or adequately protect those displaced from violence, exploitation, and abuse.

## UNICEF's Response and Funding

## Humanitarian Situation Report No. 5

unicef   
for every child

## Situation in Numbers

 **2,288,000**  
children in need of humanitarian assistance (HRP April 2021)

 **4,400,000**  
people in need (HRP April 2021)

**410,933**  
IDPs in the NW/SW regions (UN OCHA, February 2021)

**360,547** returnees in the NW/SW (UN OCHA August 2020)

**321,886** IDPs in the Far-North (IOM, June 2020)

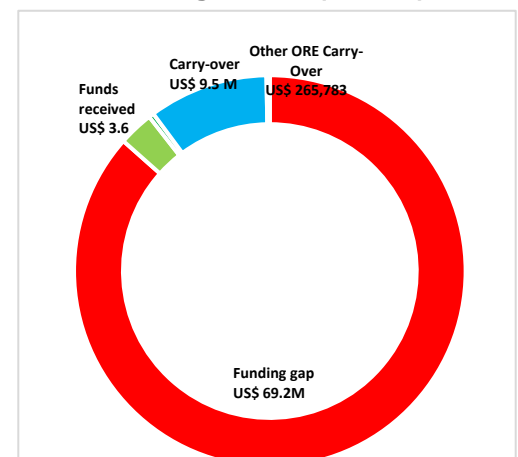

**123,489** Returnees in the Far-North (IOM, June 2020)

\*In complement, there are 302,000 IDPs in the Adamaoua, Littoral, West, and Centre regions (MSNA West, Littoral UNOCHA August 2020, MIRA Centre region, September 2020) bringing the total of IDPs to 712,933 people.

## UNICEF Appeal 2021

**US\$83,074,000**

Funding Status (in US\$)

\*Funding available includes funds received in the current year; carry-over from the previous year; and repurposed funds with agreement from donors

## Funding Overview and Partnerships

In 2021, UNICEF Cameroon is appealing for US\$83,074,000 in support of a lifesaving and protection-based response for children and women affected by humanitarian crises in Cameroon. The COVID-19 emergency response has been incorporated into the UNICEF Cameroon HAC 2021 appeal. As of May 2021, UNICEF had received US\$3,693,257 from the Government of Japan, Swedish SIDA and UNICEF's Global Thematic Funds. The office was also able to carry-over US\$9,471,837 from 2020. As we move into the second half of the year it is critical that we are able to respond to flood induced needs and prevent water borne diseases. UNICEF expresses its sincere gratitude to all public and private donors for their contributions.

## Situation Overview and Humanitarian Needs

According to the World Health Organisation and the Ministry of Public Health, there were 79,521 cumulative positive COVID-19 cases and 1,302 confirmed deaths from COVID-19. This is a 1.6 per cent fatality rate, the fourth highest in Africa. While the epidemiological curve is showing the first signs of decreasing, the COVID-19 vaccination uptake remains poor in the country. As of June 2, only 63,404 people have been vaccinated with a first dose nationwide, including 15,119 health personnel. The greatest majority of vaccinations have been conducted in the Far North and Centre regions. In collaboration with partners, UNICEF launched a COVID-19 sensitisation campaign to fight against COVID-19 vaccine hesitancy. However severe financial gaps constrain the full implementation of the RCCE response.

Added to these needs are those of over 4.4 million people, nationally of which half are children requiring humanitarian assistance. These needs are the result of protracted and new conflict displacements in the NW/SW and the Far-North regions. Seasonal risks such as floods and disease outbreaks, including communicable diseases such as measles and cholera remain real threats to already vulnerable families.

In particular, the preliminary results of the SMART-SENS survey conducted in February 2021 reveals significant nutrition needs among the refugee population. The survey identifies a high prevalence of acute malnutrition among Central African refugees (12.5 per cent in and outside of sites). These new figures illustrate a deterioration in the prevalence of acute malnutrition, compared to 2016. In 2016, the rates were 9.6 per cent in site and 8.8 per cent outside of sites. Also, an increase in severe acute malnutrition (SAM) among Nigerian refugees in the Minawao camp, (1.7 per cent) compared to 2016 (0.2 per cent).

Violent clashes between government forces and non-state armed groups (NSAGs) in the NW/ SW regions remains a root cause for population displacement. As of May 2021, according to UN OCHA, 18,223 conflict-affected people fled across both regions, the majority in the NW, (73 per cent ) and a minority to the SW region. In this climate, the vulnerable population is exposed to targeted attacks, destruction of property, crossfire, and the consequences of Improvised Explosive Devices (IEDs) planted on roads or within areas frequented by civilians. Particularly in the NW region, inter-communal violence also adds to the conflict dynamics.

"Ghost" or lockdown days continue to hinder humanitarian access and the delivery of humanitarian aid in the NW/SW regions. From January to May 2021, 55 days (or 11 working weeks) have already been lost to imposed lockdown days.

Cameroon is the second country most affected by the Lake Chad Basin Crisis. The United Nations Department for Safety and Security (UNDSS) reported on-going predatory and criminal attacks, and abduction of civilians and additional displacements. The risk of IEDs remains a major concern. Inter-communal tension is fuelled by access constraints to natural resources. On May 18, 2021, due to water access constraints deadly confrontations between internally displaced people (IDPs) and host community members occurred in Waza (Logone et Chari) resulting in one person being killed.

Despite the context, UNICEF maintains its operational presence in most of the affected divisions and responds in key sectors in favor of vulnerable children and women. In addition to existing challenges related to security and humanitarian access, UNICEF is concerned by the lack of proper resources and funding to secure its emergency response and consolidate acquired results to support resilience of the affected population in 2021.

## Summary Analysis Program Response

### Nutrition<sup>1</sup>

#### Non-State Armed Groups (NSAG's) violence – Lake Chad Basin

In the Far-North region, UNICEF worked collaboratively with the Regional Delegation of the Ministry of Public Health to ensure the availability and access to treatment for children with severe acute malnutrition (SAM) in 366 health centres through the provision of essential nutrition supplies (RUTF, therapeutic milk, essential drugs) and WASH kits. In May 2021, 2,698 children aged 6 to 59 months including 51 Nigerian refugee children from Minawao Camp were referred and admitted into these UNICEF-supported health centres for treatment. Through home visits along with 224 community demonstration sessions (Moutourwa, Maroua 1, 2, 3), 11,940 caregivers (8,358 women and 3,582 men) were sensitised on good Infant Young Child Feeding Practices (IYCF). A total of 9,566 children from 6 to 59 months were screened for severe acute malnutrition (SAM). Among them, 1,884 were screened by their mothers who were trained to detect malnutrition in their children using Middle Upper Arm Circumference tapes and oedema measurements (MUAC

<sup>1</sup> Due to the reporting system of the Ministry of Public Health, the admission data of the concerned month is reported in the following month (i.e., March data is reported in April).

approach). In total, among the screened children, 70 were detected with SAM and 208 with moderate acute malnutrition (MAM).

The Nutrition Working Group meetings (NWG) were held respectively in Kousseri and Maroua on May 5 and 28, 2021. Nutrition actors identified the following concerns i) low completion rate of Integrated Management of Acute Malnutrition (IMAM) data in the District Health Information Software (DHIS2) platform and ii) poor RUTF stock management. As a solution, it was recommended that nutrition partners support data managers in the monitoring and analysis of the IMAM data on DHIS2 platform and that chiefs of health districts conduct a closer monitoring of stock management to avoid shortages.

From May 25 to 28, 2021, formative supervisions were carried out in six Outpatient Therapeutic Programmes (OTPs) in the Maroua 1,2 and 3 health districts. During these supervisions, a need to brief the nutrition focal persons on the use of the DHIS2 platform to monitor nutrition stock was identified.

#### North-West/South-West Crisis

UNICEF and the Regional Delegation of Public Health screened 23,712 (9,184 boys and 14,528 girls) for SAM in very hard to reach and peri-urban areas. The children were reached either through health facilities or mobile teams. Among them, 70 were identified with SAM and were referred for treatment in one of the 39 UNICEF supported health facilities, that includes 21 hospitals for the integrated management of SAM. In complement, 29,836 (20,937 women and 8,899 men) caregivers were sensitised on COVID-19 preventive practices and infant and young child feeding (IYCF) practices.

Nutrition partners continue to experience serious funding gaps limiting the response capacity. As of May 2021, only 20 per cent (US\$ 2.4 million against US\$ 11.4 million) of the HRP for nutrition in the NW/SW regions has been funded.

## Health

### National

As of May 27, 2021, 36,191 AstraZeneca vaccine doses against COVID-19 have been administered. Out of the 244 vaccination centres, 208 were operational.

### North-West/South-West Crisis

In May 2021, UNICEF supported the Regional Delegation of Public Health for the NW/SW regions for the implementation of the first round of a three-day catch-up vaccination campaign for children and pregnant women in seven health districts (Mbengwi, Njikwa, Santa, Limbe, Kumba, Mamfe and Tombel). Parallely, Caritas Kumba, Mamfe and Bamenda carried out lifesaving services, including vaccination for children and pregnant women in 17 Health Districts. A total of 8,531 children aged 0 to 23 months (4,129 boys and 4,402 girls) were vaccinated and 4,057 pregnant women were vaccinated against tetanus. Also, 3,414 children aged 6 to 59 months (1,681 boys and 1,733 girls) were vaccinated against Measles / Rubella (MR). Vitamin A supplementation was provided to 10,500 children and 5,439 children received deworming tables. All activities were conducted with strict respect to COVID-19 barrier measures (use of face masks, handwashing, and hand sanitizers).

UNICEF supported the training and deployment of 130 community health workers in two health districts (Tubah and Kumbo East) by the Regional Delegation of Public Health for the NW region. This will better equip them to ensure the continuity in the provision of care against the three key childhood diseases in children (acute respiratory infections (ARI), malaria and diarrhoea), promote health and prevent illnesses in pregnant women and sensitize the community on COVID-19 prevention methods.

## WASH

### North-West/South-West crisis

In May 2021, UNICEF's implementing partners Environmental and Protection Development Association (EPDA) and Cameroon Baptist Convention (CBC) recruited 180 volunteers. Out of those recruited, 61 were equipped with the knowledge and skills to deliver COVID-19 prevention messages. As a result, they reached 7,435 people (3,699 women and 3,736 men) in Kumbo, Jakiri and Nkambe districts in the NW region. The most significant challenge faced, is the fact that a great majority of people don't believe that the COVID-19 pandemic is real.

## Education

### National

In May 2021, in collaboration with the Ministry of Secondary Education (MINESEC), UNICEF launched a comparative analysis on the effects of Information and Communication Technology (ICT) supported learning. The analysis will assess the learning outcomes for 2,743 students in the Far North, East and Littoral regions who received Samsung tablets through the 'Connect my School' initiative to prepare for their end of year exams. Lessons were provided online by the Ministry of Secondary Education's (MINESEC) digital platform.

### NSAGs' violence – Lake Chad Basin

In May 2021, 813 pupils (85 per cent girls) were identified and trained to support school hygiene promotion activities including COVID-19 prevention and menstrual hygiene promotion among their peers. Among them, 255 were internally displaced. They reached 16,973 of their peers.

In Logone-et-Chari, Mayo-Sava and Mayo-Moskota subdivisions (Kolofata, Makari, Mayo and Mora), UNICEF's implementing partners Action Citoyenne pour le Développement Communautaire (ACDC) and the Community Humanitarian Emergency Board (COHEB) identified 157 out-of-school children living with disabilities (38 per cent girls) to be enrolled in an inclusive formal education programme for the 2021-2022 academic year.

### North-West/South-West Crisis

Under the United Nations Central Emergency Response Fund (CERF) and the Government of Canada funding, UNICEF's implementing partner, Association Des Competences Pour Une Vie Meilleure (ASCOVIME) distributed learning materials and school backpacks to 13,111 students (6,969 girls) in two communes from the Littoral and West regions, Melong and Babadjou. Among them, 3,372 (1,635 girls) were internally displaced from the NW/SW regions. Also, 3,475 adolescent girl students received hygiene kits to manage their menstrual hygiene needs, in school, and whistles and torches to be used to better protect themselves from violence, including sexual violence. Additionally, UNICEF provided equipment for 20 children, living with a disability, to ease their access to school.

In the NW region, in Mezam and Metchum divisions, UNICEF's partner Green Partner Association (GPA) distributed learning materials to 965 students (including 549 girls). Among them, 480 adolescent-girls students received hygiene kits to manage their menstrual hygiene needs. Also, GPA monitored the implementation of COVID-19 barrier measures and the utilization of handwashing in schools for 5,987 students (3,495 girls).

## Child Protection

### NSAGs' violence – Lake Chad Basin

In May 2021, UNICEF's implementing partners, Action Locale pour un Développement Participatif et Autogéré (ALDEPA) and Children's Life in Rural Area (CLiRA) ensured the provision of essential Child Protection services to conflict-affected children (IDPs, refugee and host community children). CLiRA provided psychosocial support (PSS) to 796 newly identified children (328 girls and 468 boys). Among them, 328 were internally displaced children. Parallely, ALDEPA provided PSS to 2,915 existing cases (1,426 girls and 1,489 boys). Among them, 1,292 (612 girls and 680 boys) were internally displaced, 1,325 (672 girls and 653 boys) were refugees and 200 (112 girls and 88 boys) returnee children.

ALDEPA conducted 12 positive parenting sessions to prevent child and forced marriage, sensitising 567 mothers (292 adults and 275 adolescents) in Logone and Chari, Mayo-Sava and Mayo-Tsanaga divisions. Among them, 273 were internally displaced. ALDEPA, through 180 Inter-generational/inter-religious dialogues sensitised 5,964 people (1,088 girls, 1,090 boys, 1,626 women and 2,160 men) on promotion of social cohesion, equality, and non-violence attitudes within the communities. Also, through 10 sensitisation sessions, ADELPA equipped 113 Koranic teachers as peer educators. They will promote among their colleagues and community peaceful cohabitation skills, the right of education for children and the benefits of dual koranic and formal education. Similarly, through 19 sensitisation sessions conducted by CLiRA, 723 pupils (329 girls and 394 boys) from 18 public primary schools were sensitised on the importance and value of birth registration and having a birth certificate and on the respect of COVID-19 preventive measures.

### North-West/South-West Crisis

In May 2021, UNICEF's implementing partner, LUKMEF identified, registered, and assessed 572 conflict-affected children (284 girls and 288 boys) for case management services. Among them, 259 (138 girls and 121 boys) were referred for specialised services through CP AoR Referral Pathways.

Since its establishment, no community feedback was received through the toll-free line. Case work supervisors will continue to sensitize communities on the availability of the toll-free line, to find out their reluctance to use the line (if this is the case) and then encourage them to make use of it.

Following the meeting between LUKMEF, Street Child and UNICEF to discuss the slow registration of vulnerable children for case management, this month has witnessed a significant increase in the number of children registered. This is an indication that the strategies agreed upon to address the problem are working. The cumulative number of registered children is now 1,989 out of the target of 4,500 which represents 44 per cent of the target, an increase of 13 per cent up from last month.

## Communication for development (C4D)

### National

In partnership with the Ministry of Public Health, the World Health Organisation (WHO) and the Association Camerounaise pour le Dialogue Interreligieux (ACADIR), UNICEF launched the Central Africa Hub COVID-19, calling “Christians and Muslims to fight together against Coronavirus” through sensitizations and community engagement. Similarly, along with the Ministry of Public Health and the Conseil des Imams et Dignitaires Musulmans du Cameroun (CIDIMUC), UNICEF engaged Imams and Muslim dignitaries for the vaccination of their community through the launch of the Imams vaccination campaign in the Centre region. Also, along with the Ministry of Communication and the Ministry of Public Health, UNICEF organized a COVID-19 media awareness campaign in Kalak FM Radio and Magic FM. In partnership with the Ministry of Public Health, the World Health Organisation (WHO), the Center for Disease Control (CDC), International Federation of Red Cross and Red Crescent Societies (IFRC) followed-up on the implementation of the COVID-19 socio-anthropological survey in five regions: Centre, West, Littoral, NW/SW regions. UNICEF provided support to the Ministry of Public Health with the Cameroon Association of Bloggers (ABC) for the launching of a digital communication strategy with emphasis on the analysis and treatment of feedback collected through social media.

### North-West/South-West crisis

UNICEF continued supporting community radios in the broadcasting of COVID-19 prevention and response messages. The 18 radio spots broadcast in English, French and Pidgin English address different communities (bike riders, drivers, bar owners, market women and men, school staff, caregivers, and children) reached an estimated 400,560 people. The messages also promoted the use of the toll-free number 1510 for additional information and community feedback. This month, call centres recorded 1,945 calls, mostly enquiring about the COVID-19 vaccine.

To ensure the continuity in the provision of an integrated package of basic maternal, new-born and child health care and services in the context of COVID-19 103 local community leaders were engaged and are committed to support COVID-19 sensitization, malaria and anaemia prevention, and immunization. Also, 14,491 persons were reached with lifesaving messages on integrated health package including information on access to health services. During implementation of other health activities, 2,599 persons shared their concerns and asked questions / requested for clarifications on available support services to address their needs.

## East and Adamaoua Regions (refugee and host community response)

Nutrition - In the North, Adamawa and East regions, UNICEF’s implementing partners African Humanitarian Action (AHA) and the Regional Public Health Delegation provided direct nutrition support to 531 health centres in these regions. Nutrition supplies were provided (RUTF, therapeutic milk, essential drugs) for children with severe acute malnutrition (SAM) along with WASH kits to ensure a complementary approach to support SAM treatment.

Community-based prevention of malnutrition activities identified through screening, 1,806 severely acute malnourished children aged 6 to 59 months including 65 Central African Refugee children. They were admitted into UNICEF-supported health centres for treatment. African Humanitarian Action (AHA) sensitised 34,734 caregivers (24,314 women and 10,420 men) on Infant and Young Child Feeding (IYCF) practices integrating COVID-19 specific prevention messages.

From May 17 to 21, 2021, UNICEF’s implementing partner African Humanitarian Action (AHA) carried out a joint supervision in 19 health facilities in Batouri, Kette and Garoua Boulai health districts to monitor the implementation of maternal nutrition, Infant and Young Child Feeding (IYCF), Community-based Management of Acute Malnutrition (CMAM) and micronutrient powder distribution for children aged 6 to 23 months. Supervisors recommended the respect of eligibility criteria for cash transfer.

Health – UNICEF supported the Regional Delegation of Public Health for the East region in the organisation of the preventive measles vaccination campaign in Gado refugee site. As a result, 1,000 children aged 9 months to 14 years were vaccinated against Measles/Rubella (MR).

WASH – In Garoua Boulai and Batouri district hospitals serving CAR refugees and host community members, UNICEF supported the strengthening of the water supply systems through the installation of solar pumps, the supply of tanks with six thousand litre capacity, the connection of the main treatment rooms and construction of public tap to serve surrounding communities. An estimated 1,000 people will benefit from this improvement.

Education – In May 2021, in nine schools in the East and Adamaoua regions, 35 gender-sensitive and accessible latrines and water points were completed. In 17 schools in Ngoura, Garoua Boulai, and Bertoua (East region), 16,107 primary

school pupils (including 45 per cent girls) continued to benefit from ICT supported learning. UNICEF is supporting the Ministries of Education in the identification of innovative solutions for securing the ICT equipment.

Child Protection – In May 2021, in collaboration with the Regional Delegation of Social Affairs and the Regional Delegation of Family and Women Empowerment, UNICEF’s implementing partners International Medical Corps (IMC), Association Main Solidaire (AMS), ALDEPA (for the new refugees in Gado site and Sarambi) provided psychosocial support to 1,124 children (547 girls and 577 boys) and 62 caregivers. Among them, five were children with a disability. Activities were conducted through listening and counselling sessions, recreational activities, painting, educational talks in Child Friendly Spaces and other Safes Spaces. Sixteen separated children were identified and followed-up. Twenty-seven foster families were identified and trained on basic principles of child protection care arrangements and children rights.

Eight cases of gender-based violence were reported and are being handled by partners International Medical Corps (IMC) social workers. Post Exposure Preventive (PeP) kits have been administrated and legal procedures are ongoing for the concerned cases. The GBViE awareness raising including sexual exploitation and abuse reached 4,600 (405 girls, 2,218 women, 261 boys and 1,716 men) persons in Garoua Boulai, Ketté, Meiganga, Batouri, Ngaoui and Bertoua.

Communication for Development – Through April and May 2021, UNICEF provided technical and financial support for a joint HIV and COVID-19 sensitization campaign specially targeting truckers and other populations in Garoua Boulai and Gado Badzéré. To this effect, 50 community leaders, 50 peer educators and 50 community health workers were trained and deployed for HIV and COVID-19 prevention in Garoua Boulai municipality. As a result, 1,200 truck drivers and conveyors were sensitised. Also, 7,746 teenagers and young people (4,266 girls and 3,480 boys) were reached with COVID-19 and HIV lifesaving messages in schools, associations, and youth clubs and through home visits. A total of 512 persons were voluntarily tested for COVID-19 at testing points.

## Humanitarian Leadership, Coordination, Strategy and Partnerships

The Humanitarian/Resident Coordinator in-country leads humanitarian coordination efforts, supported by UN OCHA. At the national level, UNICEF and the Government are co-leading the Nutrition, WASH and Education sectors, as well as the sub-sectoral group for Child Protection. In the Far-North region, UN OCHA leads inter-sector coordination for out-of-camp refugees, IDPs and host communities, while UNHCR oversees coordination for refugee response in the regions of the East, Adamawa, North and Far-North regions. In the NW/SW regions, clusters are activated to support the humanitarian response. UNICEF leads for the WASH, Nutrition and Education clusters and the Child Protection Area of Responsibility.

In response to the COVID-19 outbreak UNICEF co-leads with the government the joint pillar on Risk Communication and Community Engagement. The Strategic Council presided by the Ministry of Public Health leads the strategic coordination of the COVID-19 response. Its decisions are guided by a Scientific Committee. The Incident Management System informs the national and decentralised response. The COVID-19 National Plan for 2021 revolves around three strategic objectives: reduction of coronavirus transmissions, curve associated morbidity and mortality, and mitigate the health and socio-economic impact of COVID-19 on the population. The national COVID-19 response planning for 2021 has shifted to a more integrated approach, rather than one led by pillars. The response plan has also included the roll out of a COVAX vaccination campaign.

To respond to the complex and increasing humanitarian needs of children and women in Cameroon, UNICEF’s 2021 HAC prioritises: 1) mainstreaming of COVID-19 barrier measures and a response through all its interventions; 2) emphasize needs-based assessment and needs-based resource mobilization with support from data investments for evidence, targeting and advocacy, including the documentation of conflict on children; 3) strengthening gender transformative programming; 4) supporting predictable partnerships with national and international non-governmental organizations that includes capacities for compliance, technical training and quality monitoring, including third-party monitoring; and 5) stronger articulation between humanitarian and development interventions.

## Communication

From January to May 2021, communication and advocacy products focused on COVID-19, alternative learning, inclusive education, psychosocial and disaster risk reduction training of community members and teachers.
