

Reporting Period: 1 -28 February 2022

Highlights

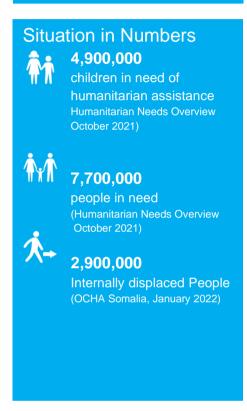

- The severe drought in Somalia is exacerbating humanitarian needs with 4.5 million people facing severe food insecurity and 3.2 million experiencing critical water scarcity.
- According to the Food Security and Nutrition Analysis Unit post Devr season assessment results, 1.4 million children under the age of five face acute malnutrition between January and December 2022 (total acute malnutrition burden), including approximately 329,500 likely to be severely malnourished.
- Some 10,000 boys and girls have been affected by school closures due to displacement and drought in Galmudug and Jubaland states.
- In 2022, 58,602 children and women have received health care as part of UNICEF's drought response. A total of 50,352 children (27,704 girls and 22,644 boys) have been treated for severe acute malnutrition (SAM).
- UNICEF has supported the provision of emergency water to 240,000 people (68,180 girls, 65,740 boys, 55,976 women, and 50,104 men) through water trucking and rehabilitation of water points in 2022.
- Between January and February, UNICEF provided educational support to approximately 24,333 children (46 per cent girls) and mental health and psychosocial support services to 23,779 children and caregivers (58 per cent girls and boys).

UNICEF's Response and Funding Status

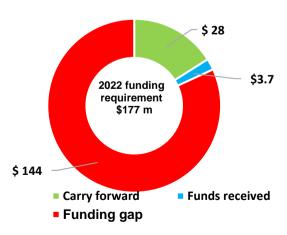

Somalia Humanitarian Situation Report No. 2

UNICEF Appeal 2022 US\$ 177 million

Funding Overview and Partnerships

In an effort to provide lifesaving and life-sustaining services for children and their caregivers in Somalia in 2022, UNICEF is appealing for US\$177 million. With generous funding received from donors, UNICEF and partners have been able to provide lifesaving and life-sustaining interventions with new funding and funds carried over from 2021. Since January 2022, UNICEF has been engaged in discussions on new contributions and/or reprogramming of existing grants to address the drought. The 2022 appeal, however, still has a funding gap of 82 per cent. Without optimal funding, UNICEF will be unable to support families with access to basic services, including safe water, health and nutrition services, learning opportunities, critical child protection support, and response to gender-based violence.

Situation Overview & Humanitarian Needs

Drought continues to exacerbate humanitarian needs in Somalia, aggravating the dire circumstances of the country's almost 4.5 million people who are food insecure. According to the Food Security and Nutrition Analysis Unit (FSNAU) post *Deyr* season assessment released on 10 February 2022, the Median Global Acute Malnutrition (GAM) increased from 2020 *Deyr* season (11.8 per cent) and 2021 *Gu* (11.1 per cent) to 2021 *Deyr* (13.0 per cent). An estimated 1.4 million children under the age of five face acute malnutrition between January - December 2022, including approximately 329,500 children likely to be severely malnourished. Unless funding improves, there may be a shortage of supplies to treat children with severe acute malnutrition (SAM) from June/July onwards.

To date, 3.2 million people have been affected by the shortage of water while about 409,000 of the 454,000 people who had been displaced in February had fled their homes due to the drought. In January, critical pump failures and a shortage of water in over 400 internally displacement camps suggest the likelihood of an increase in water borne disease. The central and southern areas of Somalia reported 844 cases of cholera/acute watery diarrhoea.

Children in Somalia are enduring the impacts of the drought, displacement, and preventable communicable diseases. By the end of February, 3,509 confirmed measles cases had been reported, about 47 per cent of the caseload of 7,494 reported in 2021 and surpassing the 2,596 cases reported in 2020. UNICEF has redirected its regular resources to support the operational cost of the planned localized measles campaign in 12 priority districts with a high prevalence rate.

As Somalia deals with a complex and volatile situation compounded by already scarce and overstretched resources, UNICEF continues to expand its response across 66 high priority districts in order to reach and meet the urgent humanitarian needs of those affected. The country's worsening humanitarian situation also calls for incorporating long-term solutions into the humanitarian response, which is in line with strengthening programming on the humanitarian, development and peace nexus.

Summary Analysis of Programme Response

Nutrition

UNICEF continued to support the federal and state ministries of health in providing integrated preventive and curative nutrition services through a partnership with local and international civil society organizations. During the reporting period, 366,311 children under the age of five (194,162 girls and 172,149 boys) were screened for acute malnutrition, of which 24,422 children suffering from SAM were treated. Additionally, 13,797 children aged 6–59 months received vitamin A supplementation (VAS) through routine supplementation, and 15,034 children aged 6–23 months (8,133 girls and 6,901 boys) were reached with multiple micronutrient supplementation (MNPs) to enhance dietary intake and prevent micronutrient deficiencies. Furthermore, 77,394 pregnant women and caretakers of children under two years received counselling services on appropriate infant and young child feeding (IYCF).

Health

In February, UNICEF continued to provide lifesaving health services to vulnerable populations in the context of the drought and increased risk of spikes in measles, cholera and AWD outbreaks as well as the COVID-19 pandemic. During the reporting period, 58,602 people (30,018 children under the age of five, 17,075 women, and 11,509 men) received curative services through outpatient visits; 5,161 and 8,146 infants received Penta 3 and measles vaccinations, respectively; and 1,421 women delivered with the support of a skilled birth attendant. UNICEF supported the localized measles vaccination campaign in central and southern areas of Somalia by providing 111,900 doses and vaccinating 86,089 children under the age of five years. To date, 1,976,913 COVID-19 vaccine doses have been administered, and over one million people have been fully vaccinated in collaboration with the Ministry of Health. Containment of cholera/AWD outbreak was supported through provision of operational support and relevant supplies to key health facilities for timely case management.

WASH

During the reporting month, UNICEF and its partners provided emergency water services to 130,000 people in targeted IDP settlements and communities through water trucking and emergency water source chlorination. Similarly, 67,584 people were reached with sustainable safe water. As part of the WASH lifesaving intervention, hygiene promotion and hygiene kit distribution activities were intensively undertaken and accordingly benefited 18,000 people.

In some of the operational areas, particularly in the Central South region, the continuing dry season has resulted in widespread water shortages among pastoral, rural, and peri-urban communities, contributing to longer operating hours and higher pumping pressure on strategic borehole systems. In addition, the existing water supply services in urban settlements are also being overstretched as a result of the new influx of people coming from drought-affected areas to main towns and villages for better access to services.

Education

UNICEF with partners supported children affected by various shocks with provision of safe drinking water, trained teachers and strengthened Community Education Committees (CECs). Education services addressed gender-based violence, psychosocial care and improvement of WASH and learning facilities as well as improved teacher incentives. UNICEF has supported the education of 24,333 children (11,190 girls) in 2022. Due to funding constraints, UNICEF has only reached one per cent of the planned target so far, while the education cluster has only reached 14 per cent (70, 000 children) of the drought response target. Partners' capacity to support schools with integrated WASH and school feeding responses to ensure continuous access to safe and protected education services, particularly in IDP sites receiving new arrivals, is limited. According to education cluster partners, 39 out of 74 districts lack emergency education interventions.

Child Protection

During the reporting period, UNICEF provided mental health and psychosocial support to 14,447 people, 52 per cent of whom were children. Play therapy, group counselling, and peer-to-peer support were some of the services provided. Family tracing services such as community-based childcare, fostering, and family reunification were provided to 659 children (309 girls and 350 boys). Gender-based violence and sexual violence against women remained prevalent, affecting 1,889 people (including 1,006 girls and 403 women). Survivors received medical support, psychological first aid, legal support, and access to livelihood options. Community empowerment through awareness raising reached 16,803 people (including 3,780 girls, 2,630 boys, 5,852 women and 4,531 men). Parents and children received gender and culturally sensitive messages on the prevention of child marriage, female genital mutilation, prevention of child recruitment, and mine risk education. A total of 488 children (113 girls and 375 boys) formerly associated with armed forces benefitted from UNICEF-supported reintegration programs. The services included interim care, family tracing and reunification, and access to formal education and vocational training opportunities.

Communications for Development (C4D), Community Engagement & Accountability

During the reporting period, UNICEF and partners, through its social and behaviour change program, responded to multiple emergencies, including COVID-19, drought, and a measles outbreak. In addition to the ongoing effort for risk communication and community engagement for COVID-19, social and behavioural change interventions have risk communication in relation to the countrywide drought and the containment of measles cases. To date, 3.6 million people have been reached in 82,2511 households across the country with key lifesaving messages. An equal number of people have also been reached through radio, television, and mobile networks. Another 1.3 million people, mostly people living in IDP camps and marginalised groups, were reached through community meetings. Health education sessions were arranged in health facilities. Some 4,849 IEC materials were distributed, besides the broadcast of 754 radio spots and 151 TV spots via prominent radio and television channels across the country.

Humanitarian Leadership, Coordination and Strategy

UNICEF's humanitarian strategy aims to respond to the needs identified in the Humanitarian Needs Overview 2022, cluster priorities, and is guided by the Core Commitments to Children in Humanitarian Action. UNICEF leads the Nutrition Cluster with support from WFP. The WASH cluster is co-led by UNICEF and Polish Humanitarian Action. Save the Children co-leads the Child Protection Area of Responsibility and the Education Cluster with UNICEF, providing dedicated full-time support to coordination and information management. UNICEF prepositioned emergency supplies in nine hubs for the rapid response. In addition, UNICEF implements its programmes in some of the hardest-to-reach areas, reassuring its robust field presence in three offices and expanding its partnerships.

Building on lessons from previous years, UNICEF will pursue a balanced approach between providing an immediate life-saving response, investing in systems strengthening and building the resilience of services and communities. UNICEF will expand programme monitoring to engage communities in the design, reach and quality of interventions. Furthermore, UNICEF programmes will be informed by solid risk analysis and humanitarian access monitoring. UNICEF will prioritize gender, disability, equity, mainstream prevention of sexual exploitation and abuse and accountability for affected populations in its programmes.

Human Interest Stories and External Media

The ongoing drought continued to be a major focus of UNICEF communication in February 2022. Some of the milestones include the release of the FSNAU report for which UNICEF issued a <u>press release</u> highlighting the 1.4 million children likely to be malnourished and needing urgent treatment UNICEF also produced several stories of families displaced by the drought:

https://www.unicef.org/somalia/stories/drought-forces-families-flee-their-homes-find-shelter-camps-internally-displaced;

https://www.unicef.org/somalia/stories/families-start-migrate-drought-worsens

UNICEF also highlighted the response, and several posts highlighted the WASH, nutrition and health response while acknowledging the support of funding partners:

UNICEF also communicated about the polio vaccination campaign, in particular the role of social mobilizers.
