NEEDS ASSESSMENT AND ANALYSIS

By collecting data on children with disabilities, it is possible to identify them, assess their needs and monitor their access to humanitarian assistance.

Disaggregate data by disability when conducting needs assessments by inserting the Washington Group Short Set of Questions (WG-SS) or the Child Functioning Survey Module (CFSM) into data collection tools.

- Report against selected programme indicators disaggregated by disability in line with the Core Commitments for Children (CCCs) disability indicators and disaggregation guidance.*
- Use disaggregated data to estimate the number of children with disabilities in the population as a baseline for monitoring access to education; and to understand how children with disabilities are impacted differently by the crisis.
- Adapt the Global Education Cluster’s Joint Education Needs Assessment Toolkit to:
  - Identify barriers faced by children with disabilities in accessing education programs.
  - Identify supports needed by children with disabilities to access education.
  - Identify gaps in the provision of disability-inclusive education.

* Internal document
Find and analyse the best available data on adults and children with disabilities within populations, from national emergency agencies, line ministries for education and inclusive education departments, and social welfare agencies.

- OPDs and international and national NGOs working with persons with disabilities may have data on children with disabilities, particularly at the community level.
- In addition to data on children and adults with disabilities, map existing education services and programmes for children with disabilities as well as social protection systems and rehabilitation and assistive technology service providers and include this data in the 5Ws Mapping Matrix tool.

Organize focus group discussions (FGDs) and key informant interviews (KIIIs) with persons with disabilities to gather information on how the crisis is impacting children with disabilities, their access to education, and local perceptions of girls and boys with disabilities.

- OPDs can be an important support in reaching out to families with children with disabilities to participate in FGDs and KIIIs.
- Organize separate FGDs with women and girls with disabilities to identify the specific risks and barriers they face.
- Ensure that persons with different disabilities are included in these consultations and that consultations are inclusive and child friendly.

Include accessibility in assessment criteria or standards used to select emergency-related buildings and facilities for education and learning.

- Conduct an accessibility assessment of existing education buildings and facilities to identify ways of improving access. Consider collaborating with organizations of persons with disabilities (OPDs) in such assessments and engage persons with different types of disabilities.

Share and use the needs assessments tools and disability data gathered under the above actions to influence UNICEF as well as inter-agency needs assessment and planning processes, such as preparedness actions, scenario-based contingency plans and Humanitarian Needs Overviews.

Collect and share data on persons with disabilities and other vulnerable groups in line with data ethics and protection principles.

- Build the capacity of data collection teams on the ethics of disability-inclusive data collection and communication with persons with different types of disabilities.
- Support the capacity of partners to protect the rights of persons with disabilities in relation to data ethics and protection.
- Ensure that persons with disabilities can give their informed consent and decide whether their personal data is collected, e.g., information must be accessible, more time might be required during data collection, and some persons with disabilities might want to ask a trusted person to support them in deciding.
UNICEF response plans are evidence-based, consistent with interagency planning and regularized into the CO workplan. Plans need to address coverage, quality and equity, which requires including all the affected population; particularly persons with disabilities, including children.

**Foster collaborations and partnerships** with agencies and organizations with expertise on disability and accessibility, including OPDs.

- Where relevant, invite OPDs and other disability actors to participate in sector/cluster coordination and technical working groups.

**Support the establishment or reinforcement of a disability coordination mechanism, e.g., Disability Working Group, to promote inter-sectoral and inter-agency coordination of disability inclusion.**

- Nominate and resource a UNICEF disability focal point and advocate for the education cluster to have a disability focal point or agency.
- Create links with other clusters for critical inter-sectoral and inter-agency actions to include children with disabilities.

Ensure that issues related to children with disabilities have been included in education response planning, i.e., identify how the crisis impacts children with disabilities differently and describe the specific barriers they face to access assistance in:

- Resource mobilization, including the Humanitarian Action for Children Appeal (HAC)*.
- Interagency planning, including the Humanitarian Response Plans (HRP).
- Revision of CO work plans in cases of a major scale-up of humanitarian response, including declared L2 or L3 emergencies.
- Planning in line with the extension (or exit) of any L2 or L3 emergency.
- Humanitarian Programme Documents (HPDs)*.
- Emergency Supply and Logistics Strategy.
- Advocacy and Communications Strategies.

Describe the concrete measures to address these risks and remove barriers to improve access to education, reflecting a twin-track approach.
RESOURCE MOBILIZATION

Forecast the costs associated with including persons with disabilities, including children, in all education programming under the Resource Mobilization Action Plan.

Incorporate dedicated *disability-inclusion funding* requirements for education programmes in flash appeals, the HAC* and donor proposals, including funding from private and public sectors, pooled funding mechanisms (such as CERF and CBF), as well as internal funding mechanisms that could be used to rapidly respond and scale-up disability-inclusive education programmes.

✔ Example of message to use when there is no available data: “Children with disabilities, estimated to make up 10 per cent of the affected population, and face multiple barriers to accessing education, including lack of safe and accessible transport, lack of accessible facilities, stigma and lack of capacity of teachers”.

✔ Allocate budget for constructing or modifying facilities to be accessible. Consider accessibility in both the establishment of temporary education facilities and the construction of infrastructure.

✔ Allocate budget to make the curriculum as well as education-related information, communications and community engagement activities, accessible, including for children with hearing, visual and intellectual impairments, for example easy-to-read production, audio messages, Braille print or hiring sign language interpreters.

✔ Allocate budget for capacity building of teachers on disability inclusion.

**Budget for costs** to ensure reasonable accommodation, provision of assistive technology, accessible communication and other support services and supplies.

✔ Without pre-existing data on children and adults with disabilities. Estimate that of 10 per cent of all children being children with disabilities.

✔ Without pre-existing data on persons with disabilities, estimate that 3 per cent of the population needs assistive devices.

  – In supply planning, include products relevant to children with disabilities, such as assistive technology (e.g., mobility devices, communication boards, screen reader software where relevant, magnifier or hearing aids) and other products (e.g., grab rails, specialized toys, adapted utensils, accessible latrine add-on, child diapers etc.), and source such products locally where possible.

  – The WHO list of priority products can inform the planning and procurement of assistive technology.

✔ Support children and young persons with disabilities and their caregivers to participate in activities; this may include transport assistance or allowances for caregivers to accompany children and young people.

IMPLEMENTATION AND MONITORING

Implementing humanitarian response plans that are inclusive of persons with disabilities requires on-going monitoring of access to education.

**Implementation**

Ensure that children with disabilities can access all education programmes by using a *twin-track approach* to address barriers to access. For example:

✔ Use UNICEF’s emergency kits and supplies that have been made accessible and inclusive such as school in a box, recreation kit, and Adolescent Kit for Expression and Innovation.

✔ Establish outreach mechanisms and collaborate with OPDs to identify and reach children with disabilities who may not be in school or are isolated in their homes.
- Make learning environments and child-friendly spaces accessible and usable by children and youth with disabilities by addressing physical barriers to access and providing training on inclusion to teachers and staff.

- Create referral pathways through inter-sectoral connections to effectively identify and respond to the needs of children with disabilities to support their access to education.
  - With the health cluster to ensure the inclusion of children with disabilities in vaccination campaigns in schools and learning spaces and through community outreach.
  - With the nutrition cluster to train teachers on inclusive school-based feeding programmes.
  - With the WASH cluster to address the accessibility of WASH facilities in schools and learning spaces.

- Capture information on access to education and barriers faced by children with disabilities in Situation Reports (SitReps) and dashboards.

- Ensure that all AAP mechanisms are accessible for children with physical, sensory, intellectual and psychosocial disabilities
  - Provide a variety of child-friendly feedback mechanisms such as group discussions with children in and out of schools etc.

- Invite OPDs to trainings organised on education in emergencies to familiarize them with the humanitarian system, international response processes and tools, and support their participation in the humanitarian response.

  - Example: Include images and stories of children with different types of disabilities in internal and external communication; portraying children as learning and included in education together with other children.

- Implement strategies that reduce disability-related stigma.
  - Involve persons with disabilities, including children and youth, in community engagement activities related to education, including as volunteers and leaders.
  - Support persons with disabilities to organize awareness campaigns and activities on the right and capacity of all children to learn.
  - Establish peer-support groups or buddy systems of children with and without disabilities.

- Ensure adequate expertise on the inclusion of children and adults with disabilities.
  - Identify, or organize where relevant, short training or briefs for education actors on the inclusion of children with disabilities.
  - Engage persons with disabilities to co-facilitate or participate in designing and delivering the training.
  - Include in surge deployment requests dedicated positions on inclusive education in emergencies.

### Monitoring

- Align indicators in donor appeals (e.g., HAC), interagency plans (e.g., HRP), UNICEF plans, Results Assessment Module (RAM) within inSight, Programme Documents (PDs) and Small-Scale Funding Agreements with the CCCs disability indicators and disaggregation guidance ([CCCs indicators guidance](#)).

- Ensure monitoring systems, such as Humanitarian Performance Monitoring (HPM), field monitoring plan or Cluster Coordination Performance Monitoring (CCPM), include both disability-specific indicators and indicators disaggregated by disability, to monitor progress in addressing the needs of children with disabilities.
  - Measure equal access to education programmes and services through disaggregation of indicators by age, sex, and disability. Use disability specific indicators to capture specific actions to address risk and barriers.
REPORTING AND EVALUATION

UNICEF and inter-agency reporting and evaluations are a key opportunity to evaluate the extent to which persons with disabilities contribute to and benefit from the response and identify learnings to improve future responses.

Engage OPDs in evaluations including in the identification of evaluation criteria, data collection, analysis and validation of findings, and formulation of recommendations and good practice.

Ensure that periodical SitReps and final humanitarian response evaluations reflect how children with disabilities have been reached and impacted.

Include disability-inclusive humanitarian action in UNICEF End of Year Reporting and Strategic Monitoring Questions (SP indicator H8.5 and linked SMQs).

Include disability-inclusive humanitarian achievements in the UNICEF reporting system, including Results Assessment Modules (RAM).*

Capture good inclusive humanitarian practices (what worked and why) and lessons learned and use the findings to provide recommendations for ongoing and future programmes.

Use the relevant Washington Group Question set to disaggregate data by disability.

Include persons with disabilities as enumerators on data collection and monitoring teams.

Example of education indicators that can be disaggregated by disability:
- Percentage/number of children accessing education (disaggregated by disability, age and sex).

Examples of specific indicators:
- Percentage of schools or learning spaces accessible to children with disabilities.
- Percentage of teachers trained on inclusive education for children with disabilities.

Review and adapt existing mechanisms like 5W mapping systems to collect relevant information on protection services related to disability.

Engage children with disabilities and their caregivers and OPDs in FGDs and KIIs to identify any barriers to accessing assistance and share information in sector and cluster coordination meetings and EMTs.

Example of education indicators that can be disaggregated by disability:
- Percentage/number of children accessing education (disaggregated by disability, age and sex).

Examples of specific indicators:
- Percentage of schools or learning spaces accessible to children with disabilities.
- Percentage of teachers trained on inclusive education for children with disabilities.

Review and adapt existing mechanisms like 5W mapping systems to collect relevant information on protection services related to disability.

Engage children with disabilities and their caregivers and OPDs in FGDs and KIIs to identify any barriers to accessing assistance and share information in sector and cluster coordination meetings and EMTs.

Include disability-inclusive humanitarian action in UNICEF End of Year Reporting and Strategic Monitoring Questions (SP indicator H8.5 and linked SMQs).

Include disability-inclusive humanitarian achievements in the UNICEF reporting system, including Results Assessment Modules (RAM).*

Capture good inclusive humanitarian practices (what worked and why) and lessons learned and use the findings to provide recommendations for ongoing and future programmes.
**Key terms**

**Accessibility:** Persons with disabilities accessing, on an equal basis as others, the physical environment, transportation, information, and communications, including information and communications technologies and systems, and other facilities and services open or provided to the public, both in urban and rural areas (Article 9 CRPD). Physical accessibility is the provision of buildings or parts of buildings for people, regardless of disability, age or gender, to be able to gain access to them, into them, to use them and exit from them. For more information: [www.accessibilitytoolkit.unicef.org](http://www.accessibilitytoolkit.unicef.org).

**Universal design:** The design of products, environments, programmes, and services to be usable by all people, to the greatest extent possible, without the need for adaptation or specialized design. Does not exclude assistive devices for groups of persons with disabilities where needed (Article 2 CRPD).

**Twin-track approach:** A disability-inclusive humanitarian response should be designed and delivered in accordance with a twin-track approach. The response should include both actions to improve the accessibility of assistance, and actions targeted to persons with disabilities themselves, to enable access on an equal basis with others.
