For every child

Whoever she is.
Wherever he lives.
Every child deserves a childhood.
A future.
A fair chance.
That’s why UNICEF is there.
For each and every child.
Working day in and day out.
In more than 190 countries and territories.
Reaching the hardest to reach.
The furthest from help.
The most excluded.
It’s why we stay to the end.
And never give up.

WHO WE ARE

UNICEF works in over 190 countries and territories to save children’s lives, to defend their rights, and to help them fulfil their potential, from early childhood through adolescence. And we never give up.

WASH

Growing up in a clean and safe environment is every child’s right. WASH program is designed to improve and implement, through the dissemination of knowledge, information management and investment in development, to ensure the equitable and sustainable use of safe drinking water, basic sanitation and the promotion of improved hygiene.

THE CATALOG

This catalog lists and summarizes the main purposes of the reports and publications carried out by UNICEF between January and December 2021.

Message

It gives me immense pleasure to bring to our readers, friends, donors and partners the Second Edition of our UNICEF Annual WASH Publication Catalogue 2021 as a compendium of key knowledge product for the Water, Sanitation and Hygiene (WASH) Sector. This catalogue showcases how UNICEF values the importance of documenting knowledge and evidence as central to learning and change and for informing and influencing the development policies and programmes in favour of children and the most vulnerable communities. We highly value your contributions and collaborations in our journey in building thought leadership in the sector.

The 2021 edition of the catalogue spreads across three parts and features 177 reports and studies including flagship publications related to WASH and COVID-19 as well as 253 publications from learning and knowledge sharing events. I take pride and honour in thanking our WASH colleagues as well as partners in generating this catalogue as our collective effort to document the tremendous work and learnings across the UNICEF regions and countries in advancing water and sanitation rights to children and communities. I hope you truly enjoy reading this version of the catalogue and we are happy to receive your feedback for continuously improving the coverage and quality of our knowledge products – for this generation of WASH practitioners and those to come!

The Water Pavilion is a multimedia pavilion located in the Blue Zone, accessible both in-person to accreditation holders and virtually through this website, throughout COP26 in Glasgow between 1 November and 12 November 2021.

At COP26 UK in Glasgow, the Water Pavilion is mobilizing the water community and partners in the global climate action community to debut the first-ever Water & Climate Pavilion at the COP. Insodoing, we hope to elevate our ideas and solutions to the highest possible levels through a unified voice on the role of water in meeting the goals of the Paris Agreement and support ambitious and science-based global climate action.

The COP26 summit brought parties together to accelerate action towards the goals of the Paris Agreement and the UN Framework Convention on Climate Change. Learn about how the negotiations at COP26 went and the outcomes achieved in the documents below.
Trainings, Workshops and Learning Events
**WASH financing course**

Leveraging financial resources is one of the six programming approaches in UNICEF’s WASH Strategy 2016-2030. The overall goal of the course is to provide a learning space for staff to deepen their understanding of financing concepts and how they are related to WASH sector goals, to strengthen their capacity with knowledge and skills to engage with partners and to leverage public funds and private finance for the WASH sector.

**Gender-responsive programming on water, sanitation and hygiene (WASH) playlist**

This learning playlist aims to provide UNICEF staff, implementing partners and consultants with tools and examples to incorporate a gender lens at each stage of the WASH programme cycle (including in humanitarian emergencies) using a results-based management approach. A results-based management approach has three stages. This learning playlist has an introductory course plus one course per phase: strategic planning (situation analysis and program design), implementation and monitoring & evaluation (M&E).

The playlist directly supports staff and partners in ensuring that gender analysis is carried out at the WASH cluster level and/or funding a partner to conduct one; identifying/ranking a substantive gender analysis within a proposal and the key elements and applications.
In March this year, UNICEF Ukraine launched an educational programme on menstrual hygiene for schoolchildren. Since then, the programme trainers have toured almost all the regions of the country, visiting both small villages and large cities. More than 70,000 teenagers and 1,200 teachers took part in the workshops. The programme is supported by the Government of Germany through KfW.

About menstruation with no shame and myths

Purpose of this high level meeting: To drive national and local action mainly by high level decision makers, in order to sustain improved hand hygiene behaviour at the point of care. The meeting is organized in the context of the World Hand Hygiene Day 2021.

Objectives:
- Outline the case for the range of hand hygiene investment and improvement efforts to be taken in health care, especially by decision makers at national and facility level.
- Showcase policy maker and national leads’ views on how to achieve hand hygiene action at the point of care, presenting their country improvement efforts related to the different aspects of the WHO multimodal hand hygiene improvement strategy.
Latt say handwashing pilot project Facebook campaign

What was the campaign reach? The four main pieces of content from the campaign achieved 2.9m views, 58k interactions and 8.4k shares. Cross-posting across different Facebook pages helped broaden audience reach.

What was the campaign engagement? The campaign launched in the height of the Covid-19 third wave in Myanmar when appetite for health information was particularly high. Latt Say content was watched primarily by audiences in Yangon where Covid-19 hit hardest, engaging a balanced split of men and women aged under 35 years.

UNICEF Indonesia has developed a hygiene behaviour change training guide as part of capacity strengthening efforts to improve Handwashing with Soap (HWWS) practices in Indonesia. Based on evidence generated from a formative research, the training guide contains a set of systematic interventions to promote and sustain HWWS practices in communities, schools and in health care facilities. The training content provides front-line government and development staff including environment health officers, hygiene promoters, teachers and WASH practitioners a theoretical and practical understanding of the linkages between hygiene and health outcomes, and more.

This course has been developed to improve rural sanitation programmes and contribute to the worldwide drive to achieve the Sustainable Development Goals. It is intended for people working or planning to work in or with the water, sanitation and hygiene (WASH) sector.

Globally, over 2 billion people still defecate in the open and the majority live in rural areas. Rural sanitation programmes aim to increase sustained access to and use of toilets and decrease the rate of open defecation - but there are many and varied challenges to face. This course gives guidance on rural sanitation programming to help practitioners overcome those challenges, which in turn will lead to better and more sustainable programme outcomes.
The Graduate Professional Diploma Programme (GPDP) in Humanitarian WASH consists of 4 accredited modules that are structured in a modular and flexible way, so that a wider variety of participants can engage in it, including by opting for one module as a short, autonomous course. The themes, topics and duration of these four modules have been elaborated in a consultation process with UNICEF, IHE Delft and the main humanitarian actors who are part of the steering committee of the project. As part of this organizational cooperation for capacity development of the Humanitarian sector, it is planned that the delivery of these four modules will be extended and integrated into various academic institutions in the Global South.

This course is run under the auspices of the Singapore-UNICEF Joint Training Programme and is one of the courses offered under the SCP’s Climate Action Package. This course discusses approaches to integrated water resources and stormwater management to deal with the extreme weather conditions brought on by climate change.
With the beginning of the COVID-19 pandemic, handwashing with soap (HWWS) took centre stage in prevention and mitigation efforts in Indonesia to prevent transmission of the virus. The pandemic response efforts also widened the space to strengthen advocacy around the long term benefits of HWWS in preventing child mortality and morbidity, that have been a key focus of national sanitation and hygiene programmes as well as school health programmes for several years. The pandemic provided the impetus to accelerate ongoing efforts to promote hand hygiene on a larger scale and rally new sectors and stakeholders behind the ‘whole-of-society’ approach to implement hand hygiene initiatives and achieve health outcomes that would sustain beyond the pandemic.

This report documents the events and activities organised on the occasion of Global Handwashing Day, jointly and individually by key actors.
Learn how the water, sanitation and hygiene (WASH) sector can contribute to both climate change mitigation and adaptation efforts.

Fueling synergies through the water-energy nexus - honoring energy day at the Water Pavilion

Welcoming for the first water pavilion at COP

Day 2 highlights the climate finance to support adaptation of basic services and build community resilience, the climate risks with challenges and needs, etc.

Day 4 will talk about nature’s basic solutions and why they are so vital to climate adaptation and mitigation.

It talks about digital inclusion to enhance climate resilience, the empowering youth for climate resilient future, etc.
Day 9 talks about climate vulnerability and water resilience in small islands developing states (SIDS).

Day 7 talks about water, climate change and adaptation.

Day 8 talks about the global water partnership to secure water resources, strengthening women’s resilience to secure the next good harvest, among others.

Day 10 talks about city and built environment.

Presentation by Marieke Adank, IRC WASH, on sustainability checks, developed and executed under the ONEWASH Plus programme in Ethiopia to monitoring small town WASH services.
Climate Change is affecting more than 600 million children in the East Asia and Pacific Region every year and WASH is one of the areas most seriously affected.

Citywide inclusive sanitation: How far have we come?

This session will review latest developments, share experiences and present plans for the coming years.

Regional Sanitation Expo, Day 1

The first day featured opening remarks, a keynote speech on the sanitation sector and opportunities for the private sector engagement by UNICEF’s Associate Director for WASH; and a virtual exhibition to share innovations in facilities and service provision.

Regional Sanitation Expo, Day 2

On second day, participants joined four ‘virtual field visits’ to companies and municipal government and helped better understanding of the challenges that are facing institutions, households, and communities as well as the technical solutions that will support safe sanitation.

Regional Sanitation Expo, Day 3

The third day focused on innovations and technologies from other countries, panel discussion addressing inequalities, and drew conclusions and reflections from companies and governments across the region.

Utilities making inclusive and safe sanitation a reality

Concrete actions from operators around the world to address and solve the inclusive and safe sanitation become a reality.

Building knowledge and skills during the pandemic and a post-COVID world

Discussed the impact of the COVID-19 pandemic on girls and women’s ability to manage their menstrual health, and demonstrated the opportunity of digital platforms to reach girls and women with critical information during the pandemic and post-pandemic world.
