In Somalia, an estimated 7.7 million people, including 5.1 million children, will need humanitarian assistance in 2022 due to the devastating impact of the ongoing drought, conflict, insecurity, floods, desert locust infestation and the COVID-19 pandemic.

More than 90 per cent of Somalia is affected by severe to extreme drought conditions; an estimated 4.5 million people are experiencing severe water shortage, while 1.5 million children under the age of five will be severely malnourished by the end of 2022, accounting for 45 percent of the total child population, with 386,400 children likely to be severely malnourished.

UNICEF appeals for US$222.3 million to provide humanitarian services to 2.5 million people, including 1.6 million children in Somalia. The funds will allow UNICEF to scale up multi-sectoral basic services delivery focusing on hard-to-reach areas, implement humanitarian response approaches such as the Minimum Response Package (MRP), and Rapid Response Mechanism (RRM) supported by an Integrated Emergency Response Team (IERT); and strengthen its leadership role in cluster coordination and information management.

### KEY PLANNED TARGETS

- **1.1 million** primary caregivers receiving infant and young child feeding counselling
- **2.5 million** people accessing a sufficient quantity of safe water
- **300,000** children/caregivers accessing mental health and psychosocial support
- **300,000** children accessing educational services

15.7 million population projection is used for 2022 humanitarian planning processes compared to 12.3 million used in 2021.
HUMANITARIAN SITUATION AND NEEDS

The humanitarian crisis in Somalia continues to deepen, with the country facing one of the worst droughts in 40 years, heightened conflict, and severe food insecurity crippling what is left of a country that has faced persistent and recurrent humanitarian shocks for over 30 years.

According to the September (2022) Food Security and Nutrition Unit's technical release, approximately 6.7 million people across Somalia are expected to face Crisis (IPC Phase 3) or worse acute food insecurity outcomes (IPC4) between October and December 2022. Furthermore, in Baidoa district, the acute malnutrition threshold for famine (IPC Phase 5) has been exceeded, making the situation in the Bay area very precarious. Mortality (Crude Death Rate) has surpassed the Emergency (IPC Phase 4) threshold in Bay Agropastoral of Burhakaba and Baidoa districts, and death rates among children have exceeded the Emergency (IPC Phase 4) threshold in Bay Agropastoral of Baidoa district.

In 2022, out of the total 1,233,000 people displaced internally, 857,000 left their homes due to the worsening drought. The country’s dire humanitarian situation is expected to get worse over the next few months, with grave concerns about rising death rates.

According to the nutrition cluster, a significant increase in the admission of severe wasting cases has been observed across the country. Between January and June 2022, admissions of severe wasting have increased by 49 per cent, 39 per cent, and 17 per cent in comparison to the same time in 2021, 2020, and 2017.

In Somalia, an estimated 71 per cent of the population lives below the poverty line. At least 58 per cent of internally displaced and 46 per cent of the host community members earn between US$0 to US$15 per month. In total, 7.7 million people, including 5.1 million children, will need humanitarian assistance in 2022.

By the end of 2022, an estimated 1.5 million children under 5 years of age are likely to be wasted, including 386,400 severe cases. In addition, an estimated 6.5 million people lack access to essential health services. Approximately, 6.4 million people need access to emergency water, sanitation and hygiene (WASH) services of which 3.5 million will need safe drinking water, 5.1 million sanitation services, and 6.4 million hygiene supplies.

Furthermore, high displacement rates and heightened risks of gender-based violence create psychosocial and mental health challenges for 2.3 million children. More than 3.1 million children are out of school while 900,000 are at risk of dropping out of school.

SECTOR NEEDS

- 2.4 million people in need of nutrition services
- 6.5 million people in need of health assistance
- 6.4 million people in need of WASH services
- 2.3 million children in need of protection services
- 3.1 million children in need of education in emergency support

STORY FROM THE FIELD

Obsinale arrived at Hargeisa Hospital’s Stabilization Center very malnourished, along with her twin sister. “I was afraid I might lose them both; even if Mersinale was the one who was severely sick and weak, Obsinale was also not in her full strength,” says their mother, Fatuma. Both were receiving treatment for malnutrition at a UNICEF-supported stabilization center. The stabilization center beds are full, and children are starting to be admitted on the floor. The drought in Somalia is forcing millions of children to starve. UNICEF, with partners, is providing lifesaving treatment and supplies, but it is not enough.

Obsinale, a one-year-old girl, is recovering from malnutrition in Hargeisa Hospital Stabilization Center.
UNICEF is substantially expanding its multi-sectoral humanitarian response, coordinating with other UN agencies, the Somali government, and partners. UNICEF leads the nutrition and WASH clusters and co-leads the education cluster and child protection sub-cluster, providing dedicated full-time support to coordination and information management. UNICEF has prepositioned emergency supplies in nine prepositioning hubs for a rapid humanitarian response. In addition, UNICEF implements its programmes in some of the hardest-to-reach areas, ensuring its robust field presence in three offices and expanding its partnerships.

Building on lessons learned from implementing the joint Minimum Response Package (MRP) with WFP and IOM in Baidoa and Banadir districts since April 2022, a rapid response mechanism is used to deliver a timely and effective minimum response package in hard-to-reach districts (displaced/returning IDP children and families and host communities) and provide essential life-saving services. UNICEF has established three Integrated Emergency Response Teams based in Baidoa, Mogadishu, and Kismayo.

UNICEF pursues a balanced approach between providing an immediate life-saving response, investing in systems strengthening, and building the resilience of services and communities. UNICEF will expand its programme monitoring to engage communities in the design, reach, and monitoring the quality of services. Furthermore, UNICEF supported programmes are informed by solid risk analysis and humanitarian access monitoring. UNICEF prioritizes gender, disability, equity, and mainstreams PSEA\(^{28}\) and AAP\(^{29}\) in its programmes.

UNICEF will also continue to provide life-saving health and nutrition interventions through community-based activities for affected populations. In 2022, UNICEF is expanding its Risk Communication and Community Engagement strategies to reach families affected by emergencies. UNICEF also supports nutrition services targeting children and pregnant/lactating mothers with nutrition screening, vitamin supplementation, promotion of safe infant and young child feeding practices, and treatment for severe wasting\(^{30}\).

UNICEF’s water and sanitation programme focuses on establishing safe, sustainable water supply systems including strategic boreholes drilling, maintaining, upgrading, and expanding water structures, sanitation facilities and distributing hygiene kits and information\(^{31}\).

On the protection of children, UNICEF continues with prevention campaigns and specialized services targeting survivors of gender-based violence. In 2022, UNICEF aims to scale up its mental health and psychosocial support program. Children associated with armed groups will have access to psychosocial support and life skills to facilitate their reintegration.

Vulnerable children and youth will participate in safe and protective educational programmes that allow for the continuation of learning, the development of literacy and numeracy skills, and opportunities for structured recreation and play.

Vulnerable children and families will receive social protection services, including humanitarian cash transfers, in line with the Grand Bargain commitments and leveraging UNICEF’s current support to the Government’s social transfers delivery mechanisms.
UNICEF has increased its appeal to US$222.3 million to meet the rapidly growing humanitarian needs of 2.5 million people, including 1.6 million children in Somalia. This represents an increase of US$45.3 million due to the worsening drought that now affects 6.7 million people across the country.

Building on the humanitarian sector’s success in preventing famine in 2016 and 2017, more should be done to respond to exponentially increased humanitarian needs, which would need major investment and strengthened humanitarian, development, and peace actor linkages. Thus, as needs continue to rapidly grow, UNICEF Somalia requires additional timely and flexible funding to respond effectively and efficiently to the ongoing crisis. Furthermore, with a higher financial appeal, UNICEF and its partners will aim to scale up integrated multi-sectoral services in hard-to-reach areas. Finally, UNICEF will continue to strengthen activities that support accountability to the affected people (AAP) and its humanitarian cluster coordination and information management. Without the required funding, UNICEF won’t be able to help families get access to basic services like clean water, health and nutrition services, learning opportunities, critical child protection support, and responses to gender-based violence.

Thus, flexible humanitarian funding will be vital to meet the pressing needs of children and their families in Somalia, who are experiencing the devastating impacts of the worsening drought, armed conflict, and large-scale population displacement.

1. Due to the increased humanitarian need caused on by the worsening drought, UNICEF has increased its target of reaching 1.6 million people, set at the beginning of the year, to 2.5 million. Furthermore, as there are also modifications to the humanitarian assistance delivery approaches, UNICEF modified its Humanitarian Action Children appeal to ensure that its targets and priorities are aligned with the interagency famine prevention strategy released in June.

2. Office for the Coordination of Humanitarian Affairs, Somalia Humanitarian Needs Overview (HNO) 2022.

5. UNICEF has increased its target by 56% in order to significantly scale up its response, focusing on 32 priority one districts with a population of 4.6 million people.

6. Office for the Coordination of Humanitarian Affairs, Somalia Humanitarian Needs Overview (HNO) 2022. The estimate includes 64 per cent children, 15 per cent persons with disabilities, 49.5 per cent are women.

7. Internally displaced persons, persons with disabilities and minority clans are the most affected in terms of exclusion from humanitarian assistance.

8. Office for the Coordination of Humanitarian Affairs, Somalia Humanitarian Needs Overview (HNO) 2022. The estimate includes 15 per cent of children with disabilities, 49.5 per cent are girls.

9. This figure was calculated based on the highest WASH target of people reached with emergency water services (2,448,013) to avoid double-counting. Gender disaggregation used for humanitarian planning purposes in 2022 is: 49.5 per cent female, 64 per cent children, and 15 per cent children living with disabilities and/or difficulties. UNICEF is committed to needs-based targeting, which means covering the unmet needs of children; and will serve as the provider of last resort where it has cluster coordination responsibilities.

10. This figure was calculated based on estimate of 64 per cent of children of the highest WASH target of people reached with emergency water services (2.5 million) to avoid double-counting. This total includes 49.5 per cent girls and 15 per cent children with disabilities.

11. Multi partner technical release on Somalia, Food security and Nutrition unit, 12 September 2022.

12. Joint FSNAU and FEWS NET Food Security Alert on Famine Projection in Bay Region of Somalia, 5 Sep 2022

13. Displacements monitored by UNHCR Protection and Return Monitoring Network (PRMN)

18. WASH cluster estimates to inform Humanitarian Needs Overview 2022.

20. Education Cluster report, July 2022

21. Nutrition sector estimate used for Humanitarian Needs Overview 2022 (49.5 per cent girls, 15 per cent children with disabilities).

22. Health sector estimate used for Humanitarian Needs Overview 2022

23. WASH sector estimate used for Humanitarian Needs Overview 2022

24. Gender-based violence sub-sector estimates that 2,289,689 people will need GBV services in 2022.

26. Ibid.

27. UNICEF leads cluster coordination for the WASH, nutrition and education clusters and the child protection area of responsibility.

29. Accountability to Affected People(AAP).

30. Multi-sectoral engagement on nutrition is an essential strategy to holistically address the needs of malnourished children. To reach higher coverage in the resource-constrained environment, various approaches have been adopted including simplification, strengthening of the nutrition supply chain, expansion of partnerships.

31. In drought induced IDPs setting, the immediate response focuses on life-saving interventions but also includes building the resilience of affected communities through early warning systems (for risks and hazards) and risk prevention/reduction approaches: functional WASH information management systems, community engagement, appropriate design and technology for drought/ resilient water systems, crisis resilient service management, nutrition-sensitive WASH interventions and considerations for conflict-mitigation.

32. Infant and Young Children Feeding practices (IYCF).

33. The 1, 278,326 target includes children vaccinated through targeted campaigns.

34. Access to outpatient consultations and referrals.

35. The indicator “number of people reached with emergency water services ” is being used for 2022 humanitarian performance monitoring 2022. According to WASH cluster reports, more than 150 strategic boreholes are currently nonfunctional, and UNICEF has increased its emergency water provision target considerably in order to reach people in drought affected areas.

36. 11,752,897 people rounded up to 12 million

37. The population targeted is higher than the total number of people/children to be reached because the target includes mass media outreach.

38. 783,527 people rounded down to 780,000.

39. Funds available include humanitarian and other types of funding.
