

Tunisia

MENA GENERATION 2030 COUNTRY FACT SHEET

DEMOGRAPHIC PROJECTIONS

Number of total population and adolescents (10-19 years), 2015, 2030 and 2050 (in millions)

THE PROSPECT OF A DEMOGRAPHIC DIVIDEND

The most urgent policy priorities:
Empowering those of working age via initiatives targeting labor force participation and employment generation

Prerequisites for realizing the window of opportunity for accelerated economic growth offered by this demographic dividend:

- Political and social stability
- Inclusive and equitable economic and social policies
- Expanded employment opportunities

Composition of the total dependency ratio (child dependency ratio and old-age dependency ratio), 1950-2100

Population by age and sex, 2015 and 2050

HEALTH SERVICE PROVISION

Number of health service providers (doctors, nurses and midwives) for each scenario (in thousands)

EDUCATION SERVICE PROVISION

Increase in and composition of the school age population

By 2030, Tunisia will face a 15 per cent increase in school-age population (aged 5-17), resulting in the need for approximately 0.4 million additional students to be accommodated in the education system.

Quantitative/proportional change in school-age population between 2015 and 2030 (in thousands)

Assumption: Population growth follows the trend projected by the United Nations Department of Economic and Social Affairs (UN DESA)

Most urgent policy priorities

Ensuring access to quality education opportunities, nurturing the skills required to realize the full potential as productive members of the economy and society.

Increase in out-of-school children

If Tunisia does not address this additional influx of children and adolescents into the education system in an adequate manner, additional 65 thousand children (aged 5-17), reflecting a 26 per cent increase, may be out of school.

Quantitative/proportional change in out-of-school children between 2015 and 2030 (in thousands)

Assumption: Out-of-school children rate, i.e. percentage of the total school age population out of school, from 2015 remains the same until 2030

SCHOOL TO WORK TRANSITION

Change in and composition of the youth labor force

By 2030, Tunisia will see a youth labor force (aged 15-24) of 0.5 million, a decrease of 10 per cent compared to 2015.

Quantitative/proportional change in the youth labor force between 2015 and 2030 (in thousands)

Assumption: Labor force participation rate for both, men and women, follows the trend projected by the International Labor Organization (ILO)

Most urgent policy priorities

Ensuring (1) the supply of qualified workforce through education systems that are adjusted to labor market requirement, and (2) the demand of the economy through creating new jobs for these new labor force entrance.

Change in unemployed youth

If Tunisia does not take advantage of the influx of youth into the labor market in an adequate manner, 0.2 million youth (aged 15-24), even with a 10 per cent decrease, may be unemployed in 2030.

Quantitative/proportional change in unemployed youth between 2015 and 2030 (in thousands)

Assumption: Youth unemployment rate, i.e. percentage of the total youth population unemployed, from 2015 remains the same until 2030

BOX 1 / Female youth labor force participation

Number of youth labor force in 2015 and 2030 under different scenarios (in thousands)

- Scenario 1 – youth labor force participation for both men and women follows ILO projection for 2030
- Scenario 2 – youth labor force participation for men as in scenario 1, while for women increase to close the gender gap by half;
- Scenario 3 – youth labor force participation for men as in scenario 1, while for women increase to close the gender gap by full

Most urgent policy priorities

Realizing the full share of human capital with vast potential for economic growth, requires unlocking the potential of girls and women contributing to the labor force and productivity of the country.

BOX 2 / Government health expenditure

A growing population requires the increase in total health expenditure to even maintain the status quo. This charts shows the resulting health expenditure per capita for 2030 and 2050 if the total expenditure would remain at the level of 2015.

Domestic general government health expenditure per capita (current US\$) and total population (in millions) under assumption of constant 2015 total expenditure
