OVERVIEW

- Significant gaps remain throughout the areas affected by floods particularly in Belet Wayne and Baardheere that are currently experiencing critical sanitation gaps and this further increasing the risk of disease outbreaks.

- The effects of floods on WASH services include destruction of water infrastructure, shortage of clean water supplies, contamination of water sources, temporarily closing schools and health facilities. Intense damage on WASH infrastructure in flood affected areas is critical gap in Belet Wayne as piping networks exposed and substantial number of latrines damaged.

- Limited WASH interventions exist in flood affected areas due to insufficient funding. The available supplies are not enough to cover the needs of the flood affected population.

- High rates of open defecation in major IDP camps due to limited access to latrines. The sanitation need on the ground outpace the available support by the partners.

- Severe WASH gaps in the newly accessed areas. There are boreholes that have not been rehabilitated for the last 15-20 years. Similarly in Puntland state nearly 100 boreholes are in need for rehabilitation.

FUNDING GAPS

- Somalia WASH Cluster requested $ 259 million in aid through 2023 Humanitarian Response Plan (HRP) to reach millions of people in Somalia including those who affected by the prolonged drought with life-saving WASH assistance to reduce acute needs among most vulnerable settlements and communities. However, as of 24 May 2023, only 10.7 per cent funded.
