INTRODUCTION

UNICEF works in 190 countries and territories to protect the rights of every child. It operates in more than 130 countries, supporting governments to achieve a situation where no child dies from a preventable cause, and all children reach their full potential in health and well-being. To maximise results, UNICEF Supply Division partners with or acts as procurement agency for countries in addition to supporting a number of initiatives, for example Gavi, the Vaccine Alliance, Bill & Melinda Gates Foundation, the Measles and Rubella Initiative, and the Global Polio Eradication Initiative. UNICEF Supply Division has a key role in procurement of vaccines and immunization supplies on behalf of around 100 countries annually, supplying over 2 billion doses of vaccines reaching approximately 45% of the world’s children in support of routine immunization programs, preventive campaigns, outbreak and emergency response activities.

This year, the Vaccine Industry Consultation will feature a pre-tender meeting on Penta/ Hexavalent vaccine, Ebola and HPV, in addition to tender and market updates for routine immunization program requirements as well as emergency response stockpiles. We will be using the opportunity in this consultation to follow-up on discussions on regulatory requirements and updates to the International Guidelines on the Shipment of Vaccines, in addition to discussions on vaccine security, initiated in 2018, in the context of the global Immunization Agenda 2030, supply chain strengthening notably track and trace initiatives including bar coding. We will also include a session to update on the Humanitarian Mechanism, introduced at our Vaccine Industry Consultation in 2016.

We welcome vaccine industry representatives and global partners in immunization to the Vaccine Industry Consultation 2019 in Copenhagen!
