RESOMAL – new sachet/carton sizes

Substantial changes have been made to the sachet size for ReSoMal as well as to the carton size.

Background
ReSoMal (oral rehydration salts or ORS for severely malnourished children) is used in in-patient centres for the treatment of children with severe acute malnutrition (SAM). The introduction of ready-to-use therapeutic food (RUTF) has allowed the majority of children to be treated at the household level. As a result, in-patient treatment is now recommended only for children with clinical complications in need of medical attention.

ReSoMal contains a mixture of salts and minerals specially designed to correct deficiencies of potassium, magnesium, zinc and copper and to address high levels of sodium in children with SAM. It is supplied as powder in sachets. Previously, one sachet needed to be reconstituted before use by adding 2 litres of boiled water to the content of each sachet, producing thereafter 2 litres of rehydration solution. The reconstituted solution has to be consumed immediately or used within 24 hours if stored in a refrigerator. Now that most of the children with SAM are treated in outpatient centres with RUTF, a quantity of reconstituted ReSoMal was being wasted.

Solution
In order to resolve this problem, discussion was initiated in 2010 between UNICEF Programme Division, Supply Division, Regional Offices, nutritionists working in in-patient centres and suppliers - and concluded that the sachet sizes should be reduced. It was agreed that the optimal volume of the solution should be 1 litre. Hence, it was decided to reduce the sachet sizes by 50 per cent. New sachets must be reconstituted by adding 1 litre of boiled, cooled water, which will result in 1 litre of liquid ReSoMal.

The carton size has also been adjusted to reflect the smaller number of children treated in the feeding centres. For details see table below.

The shelf life of ReSoMal has now been extended from 24 months to 36 months, which allows us to more efficiently store the product in the Supply Division warehouse.

**Ordering**
The new ReSoMal can be ordered from Supply Division by using the following code in VISION:

**S1561125  ReSoMal,42g sachet for 1 litre/CAR-100**

Product specifications are available in the UNICEF Supply Catalogue accessible here: [https://supply.unicef.org/](https://supply.unicef.org/). The products can be found under Pharmaceuticals >Water and electrolytes.

The product composition has not been changed.

UNICEF Supply Division has inspected several manufacturing facilities and approved the following source of ReSoMal:

- FDC Ltd. India
