SDG DATA • FACTSHEET • 2020

The Factsheet 2020 provides data on Ukraine's national indicators for 2015–2019. Ukraine's national SDG system consists of 86 national targets with 183 monitoring indicators. The Factsheet aims to target national and international institutions and individual experts to feed further analytical work and decision-making with the information on SDG progress during the five previous years. The Factsheet provides summary data on the national SDGs indicators whereas the SDGs Monitoring Report* also contains disaggregation for the national SDGs indicators system. The progress on SDGs is monitored on annual basis according to the Order No. 686-p of the Cabinet of Ministers of Ukraine from 21 August 2019.

Ukraine is committed to the values and goals defined in the 2030 Development Agenda. An inclusive process of the SDGs adaptation in Ukraine resulted in establishing a national SDG system consisting of 86 national targets with 183 indicators. In addition, roles and responsibilities of the state institutions in achieving SDG targets have been defined, SDGs have been incorporated into the state programmes and regulations, a methodology for data collection and SDGs monitoring has been developed and approved by the Government and an assessment has been carried out on mainstreaming SDGs into national and subnational planning processes.

The National Baseline Report "Sustainable Development Goals: Ukraine" produced in 2017 resulted in an open process of formulation of national targets with indicators. The monitoring system for SDGs has been introduced following the SDGs adaptation decision for Ukraine. To provide all the concerned stakeholders with information about Ukraine's progress vis-a-vis the SDGs, national SDG indicators were formulated. The priority was given to the indicators on which data are made regularly available by the official statistical system and by administrative reporting procedures within the ministries, other central and local executive authorities and institutions. The 183 national SDGs indicators are more relevantly reflecting the meaning of the national SDG targets which are monitored.
